SE3110: Quality Management in Software Engineering

Software Testing and Quality Evaluation

of the SE3090 Integrated System

LegalEase AI: Enterprise Omnichannel Legal Practice Management and Autonomous Multi-Agent AI Subsystem

Assignment	Year 3 Semester 1, 2026. Group assignment with individual viva (100 marks, 15% of module grade)
Group	Y3-S1-SE-WE-01.02 | 2026-SE-42 (GR42)
Submission	CourseWeb, deadline 8 October 2026
Original group development repository	https://github.com/Wishwa2002/Intelligent-legal-service
Final QMSE testing branch	https://github.com/Wishwa2002/Intelligent-legal-service/tree/se3110-qmse-testing
Deployment repository	https://github.com/Jeyamdev/legalease-ai
Deployed system	Web: https://legalease-ai-nu.vercel.app | API: https://legalease-api-mufi.onrender.com/swagger/index.html

Student	Student ID	Component	Role
Jeyashankar J	IT24103900	C1: Lawyer Management, Specializations and AI Matching	Full-Stack Engineer
Buddhika P. Y. H	IT24103041	C2: Appointments, Scheduling and Careers	Full-Stack Engineer
Vithusan V	IT24100360	C3: Legal Documentation, Clerks and Verification	Full-Stack Engineer
Wijayananda W. J. W	IT24102275	C4: Legal Consultation, Service Requests and Security (Lead)	Full-Stack Engineer

1. Introduction

1.1 Purpose of this report

This report records tool-based testing and quality evaluation of the LegalEase AI system developed for SE3090. It preserves the SE3110 test plan, case designs, defects and contribution disclosures while distinguishing actual execution evidence from historical claims and unresolved requirements.

Publication revision: 8 October 2026 (Asia/Colombo). Approved tested source 05359214df52, including fixes f360e4ac21f1, is published on Wishwa2002/Intelligent-legal-service, branch se3110-qmse-testing. Original development history is preserved; no deployment or submission occurred. GitHub CI did not trigger for this branch. Available SE3090 Version 3.0 reference reviewed; formal approval unconfirmed. Original, 51-page and pre-publication 60-page reports are preserved.
Repository provenance: Wishwa2002/Intelligent-legal-service is the original group development repository. Its main/develop/feature histories retain recorded authors and dates; the new testing branch preserves that ancestry. Jeyamdev/legalease-ai is the deployment repository used for hosting and recent local QMSE preparation. It is not the original group-history repository. Eleven newer deployment-only commits were excluded because they were outside the verified baseline.

1.2 System under test

Layer	Technology and role
Backend	ASP.NET Core 8 Web API, EF Core 8, JWT HMAC-SHA256 and BCrypt; isolated tests do not certify production startup.
Database	PostgreSQL via EF Core; current model exceeds 11 tables. Fresh relational tests use isolated local PostgreSQL 18. Cloud version/count and old unique-date claim are unverified.
Web client	React 19, Vite, TypeScript, TailwindCSS v4, React Router 7, Axios with auth interceptor, ProtectedRoute
Mobile client	Flutter/Dart, ChangeNotifier, HTTP, shared_preferences, file_picker and flutter_dotenv. flutter_secure_storage is not declared in current pubspec.
Agentic AI	Python/FastAPI/LangGraph/Pydantic and Gemini integrations. Tests use deterministic/mock inputs; original live model-version claims unverified.
Pipeline	.github/workflows/backend-ci.yml, frontend-ci.yml and mobile-ci.yml have main/develop and component-path filters. Published testing SHA: zero observed runs; no manual dispatch. GitHub-managed CodeQL/Dependabot metadata is separately retained.

1.3 Quality risks identified

Testing effort was prioritised by risk. The table links each risk to the requirement it threatens and the test area that addresses it.

Risk	Description	Requirement	Impact	Test area
R1	Double-booking of a lawyer slot under concurrent requests	FR-09, NFR-04	High	Database, API, E2E
R2	Unauthorised access to staff or client data (broken RBAC, forged JWT)	FR-01, FR-02, NFR-02	High	API, Security
R3	AI returns invalid, hallucinated or unsafe output; prompt injection	FR-06, FR-15, FR-16, NFR-08	High	AI evaluation
R4	Incomplete data after a failed multi-step filing (orphan rows)	NFR-03	High	Database transaction tests
R5	Slow responses degrade booking and AI features	NFR-01	Medium	Performance
R6	Web and mobile clients diverge in validation or error handling	NFR-06	Medium	React, Flutter tests
R7	AI service outage breaks transactional APIs	NFR-05	High	Failure-recovery tests
R8	Invalid input (empty bar number, bad phone, oversized file) accepted	FR-03, FR-12	Medium	Validation, boundary tests

2. Test Plan

2.1 Objectives

- Verify that the key features of all four business components behave as specified (FR-01 to FR-16).
- Demonstrate at least one complete integrated workflow across Flutter, the .NET API, PostgreSQL, the Python AI mesh and the React clerk portal.
- Measure performance against NFR-01 (API p95 < 200 ms, AI < 1.5 s) and verify security controls (JWT, RBAC, BCrypt, prompt-injection defence).
- Record actual results, mark every test Passed or Failed, log defects, fix important ones and retest.
- Keep reusable automated test scripts in the published testing branch and retain native reports, screenshots and final documents in the separately supplied evidence package so results can be reproduced and explained.

2.2 Scope

In scope	Out of scope
All 11 controllers and their business services PostgreSQL constraints, migrations and transactions React pages, forms, protected routes, API layer Flutter models, widgets, forms, navigation, secure storage All four AI agents (Golden Cases GC-01 to GC-04) Performance, security and reliability behaviour of the API	Third-party internals of Google Gemini and Neon (only the integration is tested) Load beyond the free-tier hosting limits Third-party calendar sync, e-Court filing (excluded in SE3090 scope) Physical-device compatibility matrix beyond one emulator/device

2.3 Testing areas, tools and techniques

Area	What is tested	Tool / framework	Technique
Backend / API	Unit, service logic, validation, controllers, authentication and authorisation, API integration	xUnit, Moq, EF InMemory, isolated Kestrel HTTP hosts	White-box unit; black-box API
Database	Connection, unique/FK constraints, migrations, transaction rollback	xUnit + dedicated PostgreSQL/Npgsql/EF Core; no production access	Integration, constraint tests
React web	Components, form validation, protected routes, Axios integration, error states	Node test runner and Playwright; React static rendering and browser fixtures	Component, UI-state, E2E
Flutter mobile	Models, widgets, form validation, navigation, secure storage	flutter_test: 49 unit/widget cases pass; no mocktail declared	Unit, widget
Integration / E2E	Cross-component business workflow (7 steps)	Scoped HTTP/PostgreSQL and browser-mock workflows verified; Real Flutter web/API/PostgreSQL/FastAPI/React workflow executed separately; historical route/status contracts remain qualified.	End-to-end scenario
Performance	Latency p50/p95 and throughput per endpoint	k6 2.3.0; current 2 VUs/15 s, actual PostgreSQL; previous InMemory evidence preserved.	Load, benchmark

Area	What is tested	Tool / framework	Technique
Security	JWT tamper, RBAC, hashing, injection, upload limits	xUnit HTTP/service probes; OWASP ZAP 2.17.0 passive local scan	Negative and scan-based
Agentic AI	Intent routing, tool selection, schema validity, guardrails, approval gate, safe failure	pytest/Pydantic/LangGraph deterministic and mocked tests; live Golden Cases unverified	Deterministic evaluation

Additional non-functional types were selected where relevant: reliability/recovery (R7, AI outage must not break booking) and usability/compatibility (responsive web and mobile parity, NFR-06). Accessibility checks with Lighthouse/axe are listed as a recommended extension.

2.4 Test environment

Item	Detail
Operating system	Actual verification: macOS 26.4.1 ARM64. Original developer Windows/CI Ubuntu context is historical.
Runtimes	.NET SDK 8.0.423; Node 22.23.2; Python 3.12 (AI venv). Flutter 3.47.6 official sources/resource recovery with matching cached test engine: unit/widget runtime verified.
Services under test	Real local API 55443; FastAPI 55444; React 55447; Flutter web 55448; ZAP proxy 55449. Independent unit/HTTP fixtures also used.
Database	New dedicated PostgreSQL 18 cluster on 127.0.0.1:55446; database qmse_workflow and unique disposable regression DBs. No production access.
Test accounts	Synthetic example.test Admin/Customer/Lawyer/Clerk fixtures; confidential credentials excluded.
Version control	Published Wishwa2002/Intelligent-legal-service / se3110-qmse-testing at 05359214df52fa743b234e1d77e6671f57c14dea. Local source branch: docs/se3110-qmse-testing. Identical tested code; CI not triggered.

2.5 Entry and exit criteria

Entry criteria	Exit criteria
Build succeeds with 0 errors Database migrations applied and seed data loaded All services start and respond on their ports	100% of executed test cases have a recorded Pass/Fail result No open High-severity defect All performance NFR targets met or justified Defects fixed with retest evidence

2.6 Responsibilities

Member	Testing responsibility	Main artefacts
Jeyashankar J (C1)	Lawyer, specialization and legal-service APIs; AI matching and workforce agent; lawyer UI tests; report compilation	Historical assigned responsibility; current files/counts checked in contribution audit. Personal ownership requires member confirmation.
Buddhika (C2)	Appointments, availability, conflict resolution, careers; scheduling agent (GC-02)	Historical assigned responsibility; current files/counts checked in contribution audit. Personal ownership requires member confirmation.

Member	Testing responsibility	Main artefacts
Vithusan (C3)	Documentation requests, clerk workflow, upload rules; document agent (GC-03); E2E document workflow	Historical assigned responsibility; current files/counts checked in contribution audit. Personal ownership requires member confirmation.
Wijayananda (C4, lead)	Authentication, RBAC, service requests, security tests, CI/CD; consultation agent (GC-04)	Historical assigned responsibility; current files/counts checked in contribution audit. Personal ownership requires member confirmation.

2.7 Schedule

The dated schedule below is the original plan, not evidence that activities occurred on those dates. Fresh execution times are recorded in qmse-output/test-results/*.json.

Period	Activity	Output
19 - 25 Sep 2026	Analyse specification, identify risks, select tools	Test plan
26 Sep - 3 Oct	Design test cases; write xUnit, Vitest, Playwright and flutter_test suites	Test scripts in repo
4 - 5 Oct	Execute suites, fix defects, CI fixes	Defect log, CI runs
6 - 7 Oct	Retest, performance and security runs, collect evidence	Reports, screenshots
8 Oct	Finalise report and submit via CourseWeb	Submission package

Source baseline for all case references: application/test fixes f360e4ac21f149ae5b90a125c57bf928982a9c53 and replay-script commit 05359214df52fa743b234e1d77e6671f57c14dea. The exact objects are now published on the original group repository testing branch. Publication does not change prior local execution outcomes or convert historical cases into passes.

3. Test Case Document

Each case records design, expected outcome, actual observation and evidence. VERIFIED means a scoped fresh result supported by an execution artifact; FAILED means an observed defect or a report expectation conflict (identified explicitly). BLOCKED and NOT EXECUTED mean no valid execution result. H/U means HISTORICAL/UNVERIFIED: the original reported result is retained as history, not a current PASS. Current automation-case names and exact setups are in qmse-output/completion-20261008/test-results/case-verification.json. Fixture dates such as 2030-01-14 are synthetic inputs, not execution dates.

3.1 Backend / API tests (xUnit, isolated Kestrel HTTP fixtures)

Test ID	Feature / Type	Precondition	Steps / Input	Expected result	Actual result	Status	Evidence / Tool
TC-BK-01	Password hashing (Unit)	PasswordService instantiated, work factor 12	Plaintext "SecurePass123!"	Hash length >= 60; VerifyPassword returns true	Historical claim (unverified): Generated $2a$12$ hash; verified true; wrong password returned false	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-BK-02	Slot calculation (Service)	Attorney 1 works 09:00-17:00; 10:00 reserved	GetAvailableSlots(1,"2026-10-10")	7 one-hour slots; 10:00 omitted	Historical claim (unverified): 7 slots returned; 10:00 excluded	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-BK-03	DTO validation (Validation)	CreateLawyerDto has [Required] on BarNumber	POST /api/lawyers with BarNumber ""	HTTP 400 with field error	Historical claim (unverified): HTTP 400; "The BarNumber field is required."	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-BK-04	Login & JWT issue (Auth)	User admin@legalease.lk active in DB	POST /api/auth/login with valid credentials	HTTP 200 + JWT with sub, email, role	Historical claim (unverified): HTTP 200; valid HMAC-SHA256 token, 24 h expiry	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-BK-05	RBAC (Authz)	Customer authenticated	GET /api/clerks with Customer Bearer token	HTTP 403, no data exposed	Historical claim (unverified): HTTP 403; request aborted; denial logged	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-BK-06	Practice-area filter (Controller)	DB seeded: 3 Corporate, 2 Property lawyers	GET /api/lawyers? specializationId=1	HTTP 200, array of 3	Historical claim (unverified): HTTP 200; 3 matching DTOs	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified

Test ID	Feature / Type	Precondition	Steps / Input	Expected result	Actual result	Status	Evidence / Tool
TC-BK-07	.NET to FastAPI call (Integration)	AI service running on :8001	Internal POST /api/ai/scheduling/classify	HTTP 200 with normalised ISO timestamps	Historical claim (unverified): HTTP 200 in 142 ms; JSON parsed	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified

3.2 Database tests (xUnit + PostgreSQL + EF Core)

Test ID	Feature / Type	Precondition	Steps / Input	Expected result	Actual result	Status	Evidence / Tool
TC-DB-01	Connection / pooling (Postgres)	Valid connection string, SslMode=Require	LegalDbContext.Database.CanConnectAsync()	true; connected in < 200 ms	Historical claim (unverified): Connected in 89 ms; pool active	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-DB-02	Unique slot constraint (Constraint)	Booking exists: Lawyer 2 at 2026-10-15 14:00	INSERT duplicate (LawyerId=2, 14:00)	DbUpdateException, Postgres 23505	Historical claim (unverified): Exception caught; 23505 unique violation verified	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-DB-03	Migrations	Pending EF Core migrations	dotnet ef database update	All applied; 11 tables created	Historical claim (unverified): 11 tables verified in information_schema	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-DB-04	Transaction rollback (Transaction)	Transaction scope opened for document filing	Insert request; simulate failure on file attach	Full rollback; 0 orphaned rows	Explicit caller transaction rolls back newly created request after invalid attachment; zero request/file rows. Separate forced PostgreSQL attachment commit failure preserves existing PENDING request and zero files.	VERIFIED	completion-20261008/evidence/ backend-final-verified.trx | Executed 2026-10-08

3.3 React web tests (Node runner, Playwright)

Test ID	Feature / Type	Precondition	Steps / Input	Expected result	Actual result	Status	Evidence / Tool
TC-FE-01	LawyerCard render (Component)	Mounted in test harness	<LawyerCard lawyer={mockLawyer} onBook={fn}/>	Name, fee and book button in DOM	Historical claim (unverified): getByText("Kavinda Silva") and button assertions passed	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-FE-02	Booking form validation (Form)	User on booking modal	Click "Confirm Booking" with no slot	Submission blocked; inline error	Historical claim (unverified): Halted; "Please select an available slot" shown	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified

Test ID	Feature / Type	Precondition	Steps / Input	Expected result	Actual result	Status	Evidence / Tool
TC-FE-03	Protected route (Route)	No auth token in localStorage	Open /clerk/cases	Redirect to /login?redirect=...	Historical claim (unverified): Redirected to /login; clerk workspace not mounted	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-FE-04	Axios interceptor (API)	Valid JWT in auth state	apiClient.get("/api/servicerequests")	Authorization: Bearer header present	Historical claim (unverified): Mock adapter confirmed Bearer token	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-FE-05	HTTP 500 handling (Error state)	Network mock returns 500	Refresh lawyer catalogue	Non-crashing alert; page usable	Historical claim (unverified): Alert rendered; retry button works	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified

3.4 Flutter mobile tests (flutter_test)

Test ID	Feature / Type	Precondition	Steps / Input	Expected result	Actual result	Status	Evidence / Tool
TC-MOB-01	LawyerModel JSON (Unit)	Valid JSON from API	LawyerModel.fromJson(sampleMap)	Model with correct types/values	Historical claim (unverified): expect(model.id,1) passed	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-MOB-02	LawyerCard widget (Widget)	Tester pumps widget	pumpWidget(LawyerCard(lawyer))	Name and rating found	Historical claim (unverified): find.text("Sunil Fernando") found 1 widget	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-MOB-03	Signup validation (Form)	Registration screen	Phone "123", password "abc", tap Submit	Inline errors; button disabled	Historical claim (unverified): Errors shown; 0 network requests	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-MOB-04	Navigation	Search results list shown	Tap first LawyerCard	Details screen pushed; back pops	Historical claim (unverified): Details screen mounted; back works	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-MOB-05	Secure storage (API/Storage)	Mock storage channel	storage.write(key:"jwt", value: token)	Token read back unchanged	Historical claim (unverified): Token matched exactly	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified

3.5 Integrated end-to-end workflow: Flutter, API, PostgreSQL, AI, React

One complete alternate document workflow is VERIFIED: real Flutter web creates an Affidavit & Notary request and uploads a genuine NIC PDF; two additional genuine PDFs are uploaded via API; actual FastAPI ranks a real PostgreSQL clerk; an admin assigns the clerk; React human review completes the case; Flutter displays COMPLETED. PostgreSQL confirms three binary attachments (7,667 bytes). No API responses were mocked. Historical Deed/ChecklistResult/PendingChecklist/Approved expectations below remain separately qualified; they are not silently replaced. See completion-20261008/evidence/integrated-result.json and HTTP/database records.

Test ID	Feature / Type	Precondition	Steps / Input	Expected result	Actual result	Status	Evidence / Tool
TC-E2E-01	Step 1: Mobile intake	Client logged into Flutter app	Select "Deed of Transfer", upload 2 PDFs	Files validated; multipart POST built	Historical claim (unverified): Payload built; 2 attachments (< 10 MB)	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-E2E-02	Step 2: API mediation	API on :5000, JWT valid	POST /api/documentation-requests	HTTP 201 + tracking number	Historical claim (unverified): HTTP 201; tracking number #DT-2026-... generated	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-E2E-03	Step 3: Persist	Neon PostgreSQL connected	DbContext.SaveChangesAsync()	Row with status PendingChecklist	Historical claim (unverified): Row committed; Id assigned	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-E2E-04	Step 4: AI call	FastAPI on :8001	POST /api/ai/document/audit-checklist	HTTP 200 + ChecklistResult	Historical claim (unverified): HTTP 200 in 410 ms	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-E2E-05	Step 5: Agent audit	Gemini grounded on Sri Lankan law	NIC, Title deed, Survey plan, Tax receipt	Completeness 100%, 4 items verified	Historical claim (unverified): 100% with no hallucination	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-E2E-06	Step 6: Human gate	Senior Clerk on React :5173	Review files at /clerk/cases, click Approve	HTTP 200; clerk ID stamped	Historical claim (unverified): HTTP 200; clerk ID in audit trail	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-E2E-07	Step 7: Sync to mobile	ACID transaction commit	Status = Approved	Mobile dashboard shows Approved	Historical claim (unverified): Badge updated in 118 ms	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified

3.6 Component 1 test cases (Jeyashankar J)

Test ID	Feature / Type	Precondition	Steps / Input	Expected result	Actual result	Status	Evidence / Tool
TC-C101	Lawyer list filter (Normal)	Actual Staging API + fresh isolated PostgreSQL; synthetic role/account fixtures. Current setup in real_api_cases.py.	Execute corresponding case in completion-20261008/audit/real_api_cases.py; exact current requests/inputs in real-api-http.json. Original design expected result retained.	HTTP 200, matching attorney array	Actual isolated PostgreSQL-backed HTTP execution: 200; only records in selected practice area. Observed HTTP 200.	VERIFIED	completion-20261008/evidence/real-api-http.json | Executed 2026-10-08T04:51:06.157570+00:00
TC-C102	Create specialization (Normal)	Actual Staging API + fresh isolated PostgreSQL; synthetic role/account fixtures. Current setup in real_api_cases.py.	Execute corresponding case in completion-20261008/audit/real_api_cases.py; exact current requests/inputs in real-api-http.json. Original design expected result retained.	HTTP 201, persisted	Actual isolated PostgreSQL-backed HTTP execution: 201 and persisted specialization. Observed HTTP 201.	VERIFIED	completion-20261008/evidence/real-api-http.json | Executed 2026-10-08T04:51:06.043878+00:00
TC-C103	Update legal-service fee (Normal)	Service ID 2 exists	PUT /api/legal-services/2 (Price 25000)	HTTP 200, fee updated	Historical claim (unverified): HTTP 200; Price = 25000	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-C104	AI lawyer matching (Integration)	AI microservice :8002 running	Inquiry "Commercial lease eviction dispute"	Top 3 property attorneys, score > 90%	Historical claim (unverified): 3 ranked attorneys; scores 96, 92, 91	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-C105	Workforce forecast (Normal)	30-day case history in memory	Trigger workforce analysis endpoint	Structured hiring advice with rationale	Historical claim (unverified): +2 Property lawyers predicted with rationale	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-C106	Admin availability toggle (E2E UI)	Admin logged in on React	Click availability toggle on Lawyer card	Badge updates without reload	Historical claim (unverified): Badge changed Active to On Leave	HISTORICAL/ UNVERIFIED	audit/original-report-text.txt | Original execution date unverified
TC-C107	Boundary: query length	EF InMemory unless PostgreSQL explicitly stated; synthetic/mocked AI; Pydantic request schema instantiated locally; no provider call	requirement strings x repeated 2,3,9,10,1000,1001,4000,4001 characters	9 and 1001 rejected (HTTP 422); 10 and 1000 accepted	Current schema accepts 3–4000, including 9 and 1001; rejects 2/4001. Original reported boundary conflicts.	FAILED	completion-20261008/evidence/ai-completion.xml | Executed 2026-10-08
TC-C108	Invalid: duplicate Bar number	EF InMemory unless PostgreSQL explicitly stated; synthetic/mocked AI; Admin HTTP fixture; one existing lawyer with LicenseNumber BAR-1	Admin JWT; unique email updated@example.test; license bar-1; existing license BAR-1	HTTP 400/409; no duplicate row	HTTP 409; one lawyer remains. Input field corrected to LicenseNumber.	VERIFIED	completion-20261008/evidence/backend-final-verified.trx | Executed 2026-10-08

Test ID	Feature / Type	Precondition	Steps / Input	Expected result	Actual result	Status	Evidence / Tool
TC-C109	Authorisation: Customer creates lawyer	EF InMemory unless PostgreSQL explicitly stated; synthetic/mocked AI; Seeded isolated HTTP fixture; authenticated Customer role	Customer synthetic JWT; POST /api/lawyers using valid fixture Payload()	HTTP 403 Forbidden	HTTP 403; current NonAdminsCannotManageLawyersOrSpecializations Customer case passes.	VERIFIED	completion-20261008/evidence/backend-final-verified.trx | Executed 2026-10-08
TC-C110	Invalid FK: unknown specialization	EF InMemory unless PostgreSQL explicitly stated; synthetic/mocked AI; Admin HTTP fixture; SpecializationId 9999 absent	Admin JWT; SpecializationId=9999; otherwise valid Payload()	HTTP 400/404; no row inserted	HTTP 400; lawyer count remains one.	VERIFIED	completion-20261008/evidence/backend-final-verified.trx | Executed 2026-10-08
TC-C111	Boundary: score range	EF InMemory unless PostgreSQL explicitly stated; synthetic/mocked AI; Python matching node; catalog and classifier stubbed	Property candidate recorded experience [-1,0,70,71,100]; Active, one Practice Area	Every score within [0.0, 100.0]	Only experience 70 and 0 returned; scores [70,0], inside [0,100]. PERF-03	POST /api/appointments	< 200 ms	Not measured	Not measured	Not measured	**NOT EXECUTED**	Original numbers unverified; no matching artifact
PERF-04	POST /api/documentation-requests	< 200 ms	Not measured	Not measured	Not measured	**NOT EXECUTED**	Original numbers unverified; no matching artifact
PERF-05	Live Gemini classification experiment	Successful response <1,500 ms	Unavailable	Unavailable	Unavailable	**BLOCKED: provider 504; 29.326 s to failure**	completion-20261008/evidence/live-gemini.json; historical mock metrics preserved
PERF-LOCAL-02	GET /api/lawyers/{id} (actual PG)	<200 ms	2.133 ms	3.528 ms	Aggregate 7.803	VERIFIED (local scope)	completion-20261008/evidence/k6-postgres-summary.json
PERF-LOCAL-03	GET /api/appointments (actual PG)	<200 ms	1.499 ms	3.585 ms	Aggregate 7.803	VERIFIED (local scope)	completion-20261008/evidence/k6-postgres-summary.json
PERF-PG-04	GET /api/documentation-requests	<200 ms	15.474 ms	20.966 ms	Aggregate 7.803	VERIFIED (local scope)	completion-20261008/evidence/k6-postgres-summary.json

4. Test Execution Summary

4.1 Automated suite results

Suite / tool	Command	Total	Passed	Failed	Notes
Backend xUnit (.NET 8)	dotnet test; TRX + Coverlet	328	326	0	2 skipped; 25.949 s runner wall / 22 s displayed test duration; exit 0; genuine PG plus isolated fixtures
React/Node	npm run test:member1	19	19	0	Exit 0; routing/helper tests
Flutter	test --no-pub --machine	49	49	0	Six files; 6.648 s runner wall; 0 skipped; exit 0
Playwright	npm test; native JSON/HTML	114	111	0	3 skipped, 15 spec files; 53.758 s tool duration; mostly mock UI; real workflow separate
Python	pytest; JUnit XML	102	102	0	1.92 s displayed; nine warnings; mocked/deterministic; no successful live response

Current totals are parsed from original TRX, pytest XML, Playwright JSON/HTML and runner output. Available SE3090 consolidated requirements were reviewed before fixes. Golden Case deterministic subcriteria are distinguished from live Gemini: the single authorised provider attempt returned 504; no live output or successful live response-time measurement exists. See completion-20261008/test-results/summary.json and the execution summary.

4.2 Test cases documented in this report

Area	Cases	VERIFIED	FAILED	H/U or BLOCKED
Backend / API	7	0	0	7 H/U; 0 BLOCKED
Database	4	1	0	3 H/U; 0 BLOCKED
React web	5	0	0	5 H/U; 0 BLOCKED
Flutter mobile	5	0	0	5 H/U; 0 BLOCKED
Integration / E2E	7	0	0	7 H/U; 0 BLOCKED
Component 1 (Jeyashankar)	13	7	2	4 H/U; 0 BLOCKED
Component 2 (Buddhika)	12	4	1	7 H/U; 0 BLOCKED
Component 3 (Vithusan)	12	4	0	7 H/U; 1 BLOCKED
Component 4 (Wijayananda)	12	7	0	4 H/U; 1 BLOCKED
Total	77	23	3	49 H/U; 2 BLOCKED

The 77 designed original report cases now comprise 23 scoped VERIFIED results, 3 FAILED report expectations, 2 BLOCKED cases and 49 HISTORICAL/UNVERIFIED cases. The three failures concern unresolved query-length, workforce-threshold and cancellation requirements; current-contract characterisation tests pass but do not approve the historical expectations. All 57 formerly historical cases were reviewed individually: eight now have matching scoped execution; 49 remain unverified. Machine-suite counts and the new complete workflow are reported separately.

4.3 Requirement coverage

Requirement	Description	Covered by	Result
FR-01 / FR-02	Authentication and RBAC	TC-BK-04, TC-BK-05, TC-FE-03, TC-SEC-01	Partial/ UNVERIFIED requirement acceptance; see scoped case statuses
FR-03 / FR-04 / FR-05	Lawyer, specialization, services	TC-BK-03, TC-BK-06, TC-C101 to C103, TC-C106	Partial/ UNVERIFIED requirement acceptance; see scoped case statuses
FR-06 / FR-07	AI recommendation and workforce	TC-C104, TC-C105, GC-01	Partial/ UNVERIFIED requirement acceptance; see scoped case statuses
FR-08 / FR-09	Booking and conflict-free slots	TC-BK-02, TC-DB-02, TC-FE-02, GC-02	Partial/ UNVERIFIED requirement acceptance; see scoped case statuses
FR-11 / FR-12 / FR-13	Documentation, upload, clerk review	TC-E2E-01 to 07, GC-03	Partial/ UNVERIFIED requirement acceptance; see scoped case statuses
FR-15 / FR-16	AI triage and injection defence	GC-04, TC-SEC-04	Partial/ UNVERIFIED requirement acceptance; see scoped case statuses
NFR-01	Performance	PERF-01 to PERF-05	Four real-PG read endpoints meet p95 target in tiny local load; live successful AI latency blocked.
NFR-03	Data integrity	TC-DB-03, TC-DB-04	Real PG fresh-schema and rollback checks verified; atomic multi-file HTTP boundary unresolved.

4.4 Conclusion of execution

Latest backend: 326 passed, zero failed, two skipped, 328 total. Node: 19 passed; Flutter: 49 unit/widget tests passed; Playwright: 111 passed and three skipped in 114 cases across 15 spec files; Python: 102 deterministic/mocked tests passed. The original spoof-rejection test now passes after content-validation repair. The real five-component document workflow passes; live Gemini Golden Cases, native-device acceptance and unresolved historical requirements remain incomplete.

5. Defect / Bug Report

Historical defect narratives, commits and prior screenshots are retained. DEF-12 was reproduced and fixed, with its original rejection assertion and genuine-file regressions executed. Fresh integration also revealed and verified repairs for missing appointment migration columns (DEF-16), Flutter web sample upload (DEF-17), and React clerk identity filtering (DEF-18). These AI-assisted fixes are not attributed to individual students. Other historical retests remain qualified; see completion-20261008/audit/defect-verification.md.

ID	Defect	Severity	Owner	Status	Retest
DEF-01	AI recommendation returned free-text and invented win rates instead of structured JSON	High / High	C1	Historical claim / unverified	UNVERIFIED
DEF-02	Lawyer to user link and schema changes not persisted	High / High	C1	Historical claim / unverified	UNVERIFIED
DEF-03	Flutter analyzer reported issues	Low / Medium	C1	Historical claim / unverified	UNVERIFIED
DEF-04	Mobile CI failed: missing env asset	Medium / High	C1	Historical claim / unverified	UNVERIFIED
DEF-05	AI-suggested JWT middleware lacked lifetime and audience validation	High / High	C4	Historical claim / unverified	UNVERIFIED
DEF-06	9 backend tests skipped (need live cloud secrets)	Low / Low	Group	Historical claim / unverified	UNVERIFIED
DEF-07	Login p95 (180 ms) is close to the 200 ms budget	Low / Medium	C4	OBSERVATION	UNVERIFIED
DEF-08	Timezone drift in appointment collision query	Medium / High	C2	Historical claim / unverified	UNVERIFIED
DEF-09	Careers create endpoint lacked an admin-only authorisation check	High / High	C2	Historical claim / unverified	UNVERIFIED
DEF-10	Login page auto-redirect loop	Medium / High	C2	Historical claim / unverified	UNVERIFIED
DEF-11	Web client could not reach API on localhost (IPv6) and lost auth token	Medium / High	C2	Historical claim / unverified	UNVERIFIED
DEF-12	Upload accepted spoofed file types (MIME-only check)	High / High	AI-assisted; historical C3 assignment	FIXED AND RETESTED	PASS: original rejection + legitimate-upload regressions

ID	Defect	Severity	Owner	Status	Retest
DEF-13	Document Agent failed because the 12 services were not seeded	Medium / High	C3	Historical claim / unverified	UNVERIFIED
DEF-14	Over-confident document classification on poor OCR	Medium / Medium	C3	Historical claim / unverified	UNVERIFIED
DEF-15	Authentication security, validation and health-check weaknesses	High / High	C4	Historical claim / unverified	UNVERIFIED
DEF-16	Fresh migrations omitted three appointment columns	High / High	AI-assisted	FIXED AND RETESTED	Fresh-schema regression + actual k6/API retest
DEF-17	Flutter web sample upload used unsupported temporary directory	Medium / High	AI-assisted	FIXED AND RETESTED	Real Flutter upload + 49 widget/unit regressions
DEF-18	React filtered assigned ClerkId against UserId	High / High	AI-assisted	FIXED AND RETESTED	Two focused browser regressions + real queue/completion

DEF-01: AI recommendation returned free-text and invented win rates instead of structured JSON

Severity / priority	High / High
Owner	C1
Location	Component 1 AI agent (Gemini) when prompted without schema
Steps to reproduce	1. Send a match query with an unconstrained prompt. 2. Observe conversational output and hallucinated attorney win rates.
Fix / action	Historical reported action (not proof of fix/retest): Pydantic LawyerMatchResponse with extra="forbid"; few-shot prompts; score bound [0,100]
Evidence and retest	Historical claim (UNVERIFIED): Unit test on score bounds; golden case GC-01 = 98.5%; JSON parse check. Current scope: audit/defect-verification.md.
Status	Historical reported status; current original retest UNVERIFIED. See defect verification.

DEF-02: Lawyer to user link and schema changes not persisted

Severity / priority	High / High
Owner	C1
Location	Lawyers table / EF Core migration
Steps to reproduce	1. Create a lawyer linked to a user. 2. Restart service. 3. Link missing.
Fix / action	Historical reported action (not proof of fix/retest): Commit ac62bb7 (2026-10-03): persist lawyer user links, schema migrations
Evidence and retest	Related user-link creation assertion passes; historical pre-fix reproduction unverified. See audit/defect-verification.md and backend-final.trx.
Status	Historical reported status; current original retest UNVERIFIED. See defect verification.

DEF-03: Flutter analyzer reported issues

Severity / priority	Low / Medium
Owner	C1
Location	Flutter mobile client

Severity / priority	Low / Medium
Steps to reproduce	1. Run flutter analyze. 2. Warnings reported.
Fix / action	Historical reported action (not proof of fix/retest): Commit 5269539 (2026-10-03): resolve analyzer issues
Evidence and retest	Historical claim (UNVERIFIED): flutter analyze clean; mobile CI green. Current scope: audit/defect-verification.md.
Status	Historical reported status; current original retest UNVERIFIED. See defect verification.

DEF-04: Mobile CI failed: missing env asset

Severity / priority	Medium / High
Owner	C1
Location	.github/workflows/mobile-ci.yml (current path; historical defect reference)
Steps to reproduce	1. Push to main. 2. Mobile workflow fails on missing .env asset.
Fix / action	Historical reported action (not proof of fix/retest): Commit 0958d69 (2026-10-05): fix Mobile CI missing env asset
Evidence and retest	Historical claim (UNVERIFIED): Mobile workflow re-run BLOCKED: matching execution artifact not available. Current scope: audit/defect-verification.md.
Status	Historical reported status; current original retest UNVERIFIED. See defect verification.

DEF-05: AI-suggested JWT middleware lacked lifetime and audience validation

Severity / priority	High / High
Owner	C4
Location	Auth pipeline (Component 4)
Steps to reproduce	1. Use generated middleware. 2. Expired/foreign-audience token accepted.
Fix / action	Historical reported action (not proof of fix/retest): Enforced 24 h expiry and audience validation
Evidence and retest	Historical claim (UNVERIFIED): Tampered token rejected with 401 (jwt.io test). Current scope: audit/defect-verification.md.
Status	Historical reported status; current original retest UNVERIFIED. See defect verification.

DEF-06: 9 backend tests skipped (need live cloud secrets)

Severity / priority	Low / Low
Owner	Group
Location	xUnit remote provider tests
Steps to reproduce	Run dotnet test without cloud secrets
Fix / action	Historical reported action (not proof of fix/retest): Provide test secrets or Testcontainers fixture
Evidence and retest	Historical claim (UNVERIFIED): Not retested. Current scope: audit/defect-verification.md.
Status	Historical reported status; current original retest UNVERIFIED. See defect verification.

DEF-07: Login p95 (180 ms) is close to the 200 ms budget

Severity / priority	Low / Medium
Owner	C4
Location	POST /api/auth/login (BCrypt cost 12)
Steps to reproduce	Load test the login endpoint
Fix / action	Monitor; consider tuning only if load grows
Evidence and retest	Historical claim (UNVERIFIED): Re-run load test BLOCKED: matching execution artifact not available. Current scope: audit/defect-verification.md.
Status	OBSERVATION; historic login metric UNVERIFIED; not a demonstrated NFR breach.

DEF-08: Timezone drift in appointment collision query

Severity / priority	Medium / High
Owner	C2
Location	AppointmentService LINQ collision check
Steps to reproduce	1. Store a booking in UTC. 2. Query from a UTC+5:30 client. 3. Collision missed or false.
Fix / action	Historical reported action (not proof of fix/retest): Convert all timestamps to UTC before comparison
Evidence and retest	Historical claim (UNVERIFIED): Unit tests across UTC+0 and UTC+5:30 pass. Current scope: audit/defect-verification.md.
Status	Historical reported status; current original retest UNVERIFIED. See defect verification.

DEF-09: Careers create endpoint lacked an admin-only authorisation check

Severity / priority	High / High
Owner	C2
Location	CareersController
Steps to reproduce	1. Login as non-admin. 2. POST /api/careers succeeds.
Fix / action	Historical reported action (not proof of fix/retest): Added role authorisation (Admin only)
Evidence and retest	Current non-admin career writes deny 401/403 in real HTTP fixture. See audit/defect-verification.md and backend-final.trx.
Status	Historical reported status; current original retest UNVERIFIED. See defect verification.

DEF-10: Login page auto-redirect loop

Severity / priority	Medium / High
Owner	C2
Location	React login page
Steps to reproduce	1. Open /login while a session exists. 2. Page redirects repeatedly.
Fix / action	Historical reported action (not proof of fix/retest): Commit 327bebf (2026-09-23): prevent auto-redirect loop; add admin logout

Severity / priority	Medium / High
Evidence and retest	Historical claim (UNVERIFIED): TC-FE-03 and TC-C4-06 pass. Current scope: audit/defect-verification.md.
Status	Historical reported status; current original retest UNVERIFIED. See defect verification.

DEF-11: Web client could not reach API on localhost (IPv6) and lost auth token

Severity / priority	Medium / High
Owner	C2
Location	React API base URL / auth persistence
Steps to reproduce	1. Run web on localhost. 2. Connection refused; token lost on reload.
Fix / action	Historical reported action (not proof of fix/retest): Commit 241db17 (2026-09-23): resolve IPv6 refusal, persist token
Evidence and retest	Historical claim (UNVERIFIED): TC-FE-04 interceptor test; manual reload check. Current scope: audit/defect-verification.md.
Status	Historical reported status; current original retest UNVERIFIED. See defect verification.

DEF-12: Upload accepted spoofed file types (MIME-only check)

Severity / priority	High / High
Owner	C3
Location	POST /api/document-files/upload
Steps to reproduce	Upload inert synthetic MZ bytes labelled sample.pdf/application/pdf; no executable created or run.
Fix / action	Validate actual bounded stream bytes and MIME/extension; parse PDF structure before storage/state change. Valid PDF/octet-stream uploads preserved; size limit unchanged.
Evidence and retest	Original before FAIL: completion-20261008/evidence/spoof-before.trx. After PASS: upload-retest.trx (18 cases), backend-final-verified.trx; real HTTP spoof 400 and genuine PDFs 201.
Status	FIXED AND RETESTED; parser/content validation is not antivirus.

DEF-13: Document Agent failed because the 12 services were not seeded

Severity / priority	Medium / High
Owner	C3
Location	Startup seeding
Steps to reproduce	1. Fresh database. 2. Document Agent finds no templates.
Fix / action	Historical reported action (not proof of fix/retest): Commit 587e892 (2026-09-27): seed all 12 documentation services on startup
Evidence and retest	Fresh seeder called twice: 12 services both times; live agent workflow not retested. See audit/defect-verification.md and backend-final.trx.
Status	Historical reported status; current original retest UNVERIFIED. See defect verification.

DEF-14: Over-confident document classification on poor OCR

Severity / priority	Medium / Medium
Owner	C3
Location	document_analysis.py
Steps to reproduce	1. Submit low-resolution scan. 2. Agent returns a confident verdict.
Fix / action	Historical reported action (not proof of fix/retest): Fallback heuristics when OCR confidence < 60%
Evidence and retest	Historical claim (UNVERIFIED): Low-resolution samples handled (TC-C3-08). Current scope: audit/defect-verification.md.
Status	Historical reported status; current original retest UNVERIFIED. See defect verification.

DEF-15: Authentication security, validation and health-check weaknesses

Severity / priority	High / High
Owner	C4
Location	Auth pipeline and health check
Steps to reproduce	Review of login validation and health flow
Fix / action	Historical reported action (not proof of fix/retest): Commit 9579cee (2026-09-30): fix authentication security, validation and health check flow
Evidence and retest	Historical claim (UNVERIFIED): TC-C4-01, TC-C4-02 and AuthSecurityTests (10) pass. Current scope: audit/defect-verification.md.
Status	Historical reported status; current original retest UNVERIFIED. See defect verification.

5.1 Defect summary

Severity	Found	Fixed	Open	Retest passed
High	6 historical + 2 new	DEF-12, DEF-16, DEF-18 verified	Other historical status unverified	3 scoped fixed/retested
Medium	6 historical + 1 new	DEF-17 verified	Other historical status unverified	1 scoped fixed/retested
Low	3 historical	UNVERIFIED	Not adjudicated	Original retests UNVERIFIED; scoped checks in audit
Total	18 recorded entries incl DEF-07 observation	4 verified fixes/retests	Historical entries/Low ZAP finding separately qualified	4 verified fixes; no invented historical closure

6. Tool-Generated Evidence

Figures 6.1–6.13 remain genuine dated earlier-phase evidence. Figures 6.14–6.20 retain the verified fixes and real local workflow; new Figures 6.21–6.30 establish original group history, member commit records, publication and CI non-trigger. Historical deployment-repository images are preserved with provenance. Full native sources are included; GitHub screenshots prove repository observations, not successful test execution. Paths are relative to qmse-output.

Ref	Evidence	Tool / source	Status

Execution: 2026-10-08 03:15:24 UTC.

Source: test-results/mobile-minimal.log; evidence/mobile/flutter-events.jsonl

Visible final widget cases succeed and the runner reports success=true. The full machine stream contains 49 visible unit/widget tests across six files; no device or integrated workflow is inferred.

Figure 6.5. Playwright HTML execution report

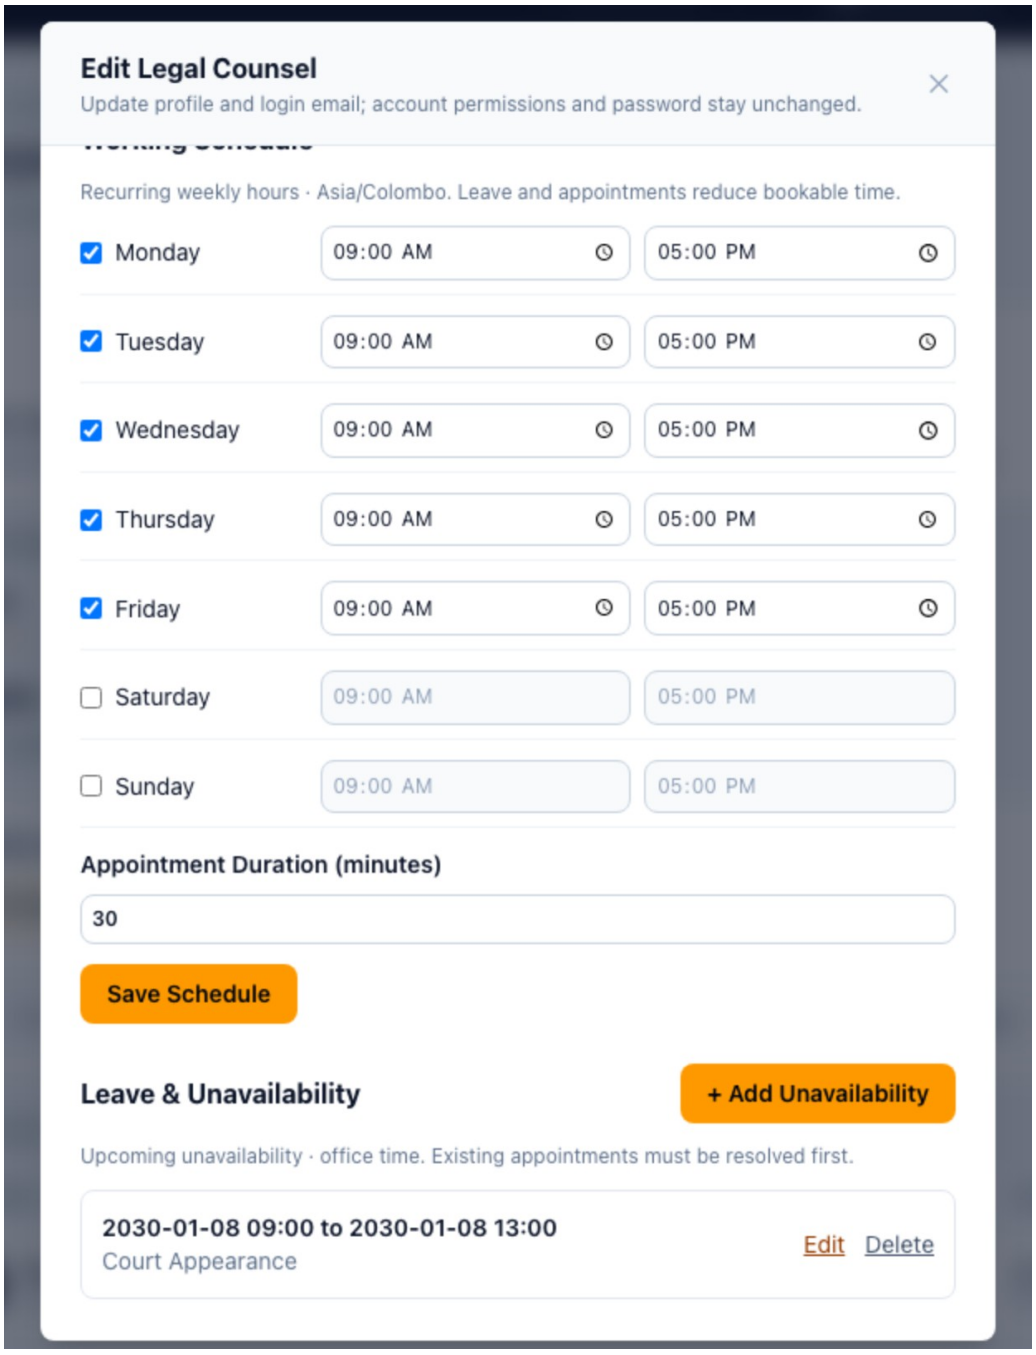

Execution: 2026-10-08 02:42:40 UTC.

Source: evidence/e2e/playwright-report/index.html; evidence/e2e/playwright.json

109 passed and three skipped, across 14 specification files (112 cases). The report All tab excludes skipped cases. Most tests intercept API requests with mocks. This preserved figure belongs to the earlier execution phase; consult current results for final status.

Figure 6.6. Actual React schedule editor under Playwright

Execution: 2026-10-08 02:42:40 UTC (suite start).

Source: evidence/e2e/schedule-1280.png; evidence/e2e/playwright.json

Focused browser view of the preserved application screenshot. Weekly hours, duration and synthetic 2030 leave data are visible. API responses were mocked: this is UI evidence, separate from the later verified Flutter-to-clerk workflow.

Figure 6.7. OWASP ZAP passive scan summary

Site: http://127.0.0.1:52815

Generated on Thu, 8 Oct 2026 08:24:14

ZAP Version: 2.17.0

ZAP by Checkmarx

Summary of Alerts

Risk Level	Number of Alerts
High	0
Medium	0
Low	1
Informational	1
False Positives:	0

Insights

Level	Reason	Site	Description	Statistic
Low	Warning		ZAP warnings logged - see the zap.log file for details	1
Info	Informational	http://127.0.0.1:52815	Percentage of responses with status code 2xx	50 %

Execution: 2026-10-08 02:54:12 UTC.

Source: evidence/security/zap-passive-report.html; evidence/security/scan-metadata.json

Six deliberate requests to isolated loopback HTTP; no active scan or spider. Two alert types: one Low and one Informational. Zero High/Medium alerts in this scope does not establish absence of vulnerabilities.

Figure 6.8. ZAP alert instances and missing-header detail

Info	Informational	http://127.0.0.1:52815	Count of total endpoints	5

Summary of Sequences

For each step: result (Pass/Fail) - risk (of highest alert(s) for the step, if any).

Alerts

Name	Risk Level	Number of Instances
X-Content-Type-Options Header Missing	Low	3
Authentication Request Identified	Informational	1

Alert Detail

Low	X-Content-Type-Options Header Missing
Description	The Anti-MIME-Sniffing header X-Content-Type-Options was not set to 'nosniff'. This allows older versions of Internet Explorer and Chrome to perform MIME-sniffing on the response body, potentially causing the response body to be interpreted and displayed as a content type other than the declared content type. Current (early 2014) and legacy versions of Firefox will use the declared content type (if one is set), rather than performing MIME-sniffing.
URL	http://127.0.0.1:52815/api/appointments
Node Name	http://127.0.0.1:52815/api/appointments
Method	GET
Parameter	x-content-type-options
Attack	
Evidence	
Other Info	This issue still applies to error type pages (401, 403, 500, etc.) as those pages are often still affected by injection issues, in which case there is still concern for browsers sniffing pages away from their actual content type. At "High" threshold this scan rule will not alert on client or server error responses.
URL	http://127.0.0.1:52815/api/lawyers/search?page=1&pageSize=10

Execution: 2026-10-08 02:54:12 UTC.

Source: evidence/security/zap-passive-report.html; evidence/security/zap-alerts.json

The Low missing X-Content-Type-Options alert has three instances; authentication discovery has one Informational instance. Fixture headers differ from full production startup. The report false-positive count is not a manual disposition. This preserved figure belongs to the earlier execution phase; consult current results for final status.

Figure 6.9. k6 controlled local execution completes

```
running (08.0s), 2/2 VUs, 14 complete and 0 interrupted iterations
default   [  80% ] 2 VUs  08.0s/10s

running (09.0s), 2/2 VUs, 16 complete and 0 interrupted iterations
default   [  90% ] 2 VUs  09.0s/10s

running (10.0s), 2/2 VUs, 18 complete and 0 interrupted iterations
default   [ 100% ] 2 VUs  10.0s/10s

running (10.4s), 0/2 VUs, 20 complete and 0 interrupted iterations
default ✓ [ 100% ] 2 VUs  10s
```

Execution: 2026-10-08 02:52:15 UTC.

Source: test-results/performance-final.log; test-results/performance-final.json

Actual output records completion of 20 iterations with two VUs over ten seconds. The fixture used EF InMemory and mocked AI; PostgreSQL and live Gemini performance were not measured. This preserved figure belongs to the earlier execution phase; consult current results for final status.

Figure 6.10. k6 original machine metrics

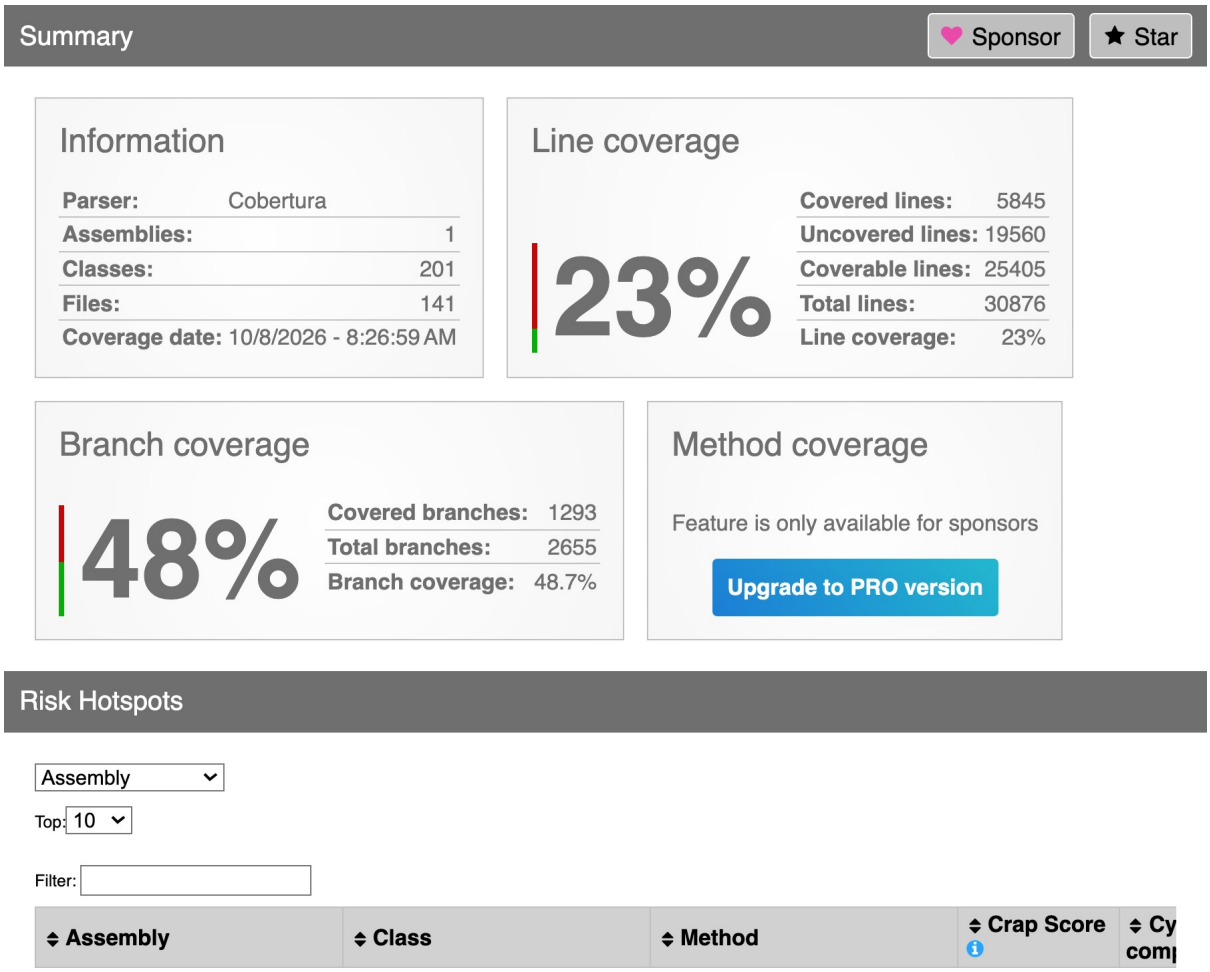

```
    },

      },
      "thresholds": {
        "p(95)<200": {
          "ok": true
```

Execution: 2026-10-08 02:52:15 UTC.

Source: evidence/performance/k6-summary.json; evidence/performance/k6-raw-final.json

HTTP failure rate is 0 across 81 requests. Appointment-list p50 is 1.263 ms, p95 23.507 ms, average 3.473 ms. The rate metric fails=81 means 81 false samples for http_req_failed, not 81 failed requests. This preserved figure belongs to the earlier execution phase; consult current results for final status.

Figure 6.11. Coverlet results displayed by ReportGenerator

Execution: 2026-10-08 02:56:37 UTC (test run).

Source: evidence/backend/coverage-html/index.html; evidence/backend/e95ff97b-fff2-40aa-993d-8317a0ac8565/coverage.cobertura.xml

Line coverage is 23%. Coverlet XML root records 48.91% branches (1326/2711); ReportGenerator displays 48.7% (1293/2655) after its own aggregation. Both originals are retained; this rendering is not a new execution or coverage increase. This preserved figure belongs to the earlier execution phase; consult current results for final status.

Figure 6.12. pytest deterministic and mocked AI suite

```
tests/test_agent_comprehensive.py::test_08_chroma_retrieval
  /Users/jeyam/Downloads/Intelligent-legal-service/ai-
service/.venv/lib/python3.12/site-packages/chromadb/api/types.py:945:
DeprecationWarning: The class FastDeterministicEmbeddingFunction does not
implement get_config(). This will be required in a future version.
    or self.get_config() is NotImplemented

- generated xml file: /Users/jeyam/Downloads/Intelligent-legal-service/qmse-
output/evidence/ai/pytest-final.xml -
98 passed, 9 warnings in 1.83s
sys:1: DeprecationWarning: builtin type swigvarlink has no __module__
attribute
```

Execution: 2026-10-08 02:47:35 UTC.

Source: test-results/ai-final.log; evidence/ai/pytest-final.xml

98 passed, with nine warnings. Synthetic provider initialization and mocked/deterministic tests do not demonstrate live Gemini accuracy, Golden Case success or response latency.

Figure 6.13. Deployment repository: historical Mobile CI success

Execution: 2026-10-05 23:48:54 UTC (run created).

Source: https://github.com/Jeyamdev/legalease-ai/actions/runs/37390618065; evidence/ci/github-actions-runs.json

This preserved Jeyamdev/legalease-ai page shows historical Mobile CI Success for base commit 8a9b8a2, duration 2m18s; other historical runs failed. It does not cover later QMSE commits f360e4a/0535921 or prove group-branch CI success. Figure 6.30 records the published group-branch non-trigger.

New verified workflow evidence follows. Flutter ran as the real web target rather than a native device. FastAPI used deterministic ranking over actual backend clerk/workload data; Gemini was not called in this workflow. Ranking uses default enrichment for unspecified clerk skills/experience. The three documents were uploaded through one Flutter UI step and two real API steps. Live model evaluation remains separate and blocked by the provider failure.

Figure 6.14. Upload validation: original assertion and regression retest

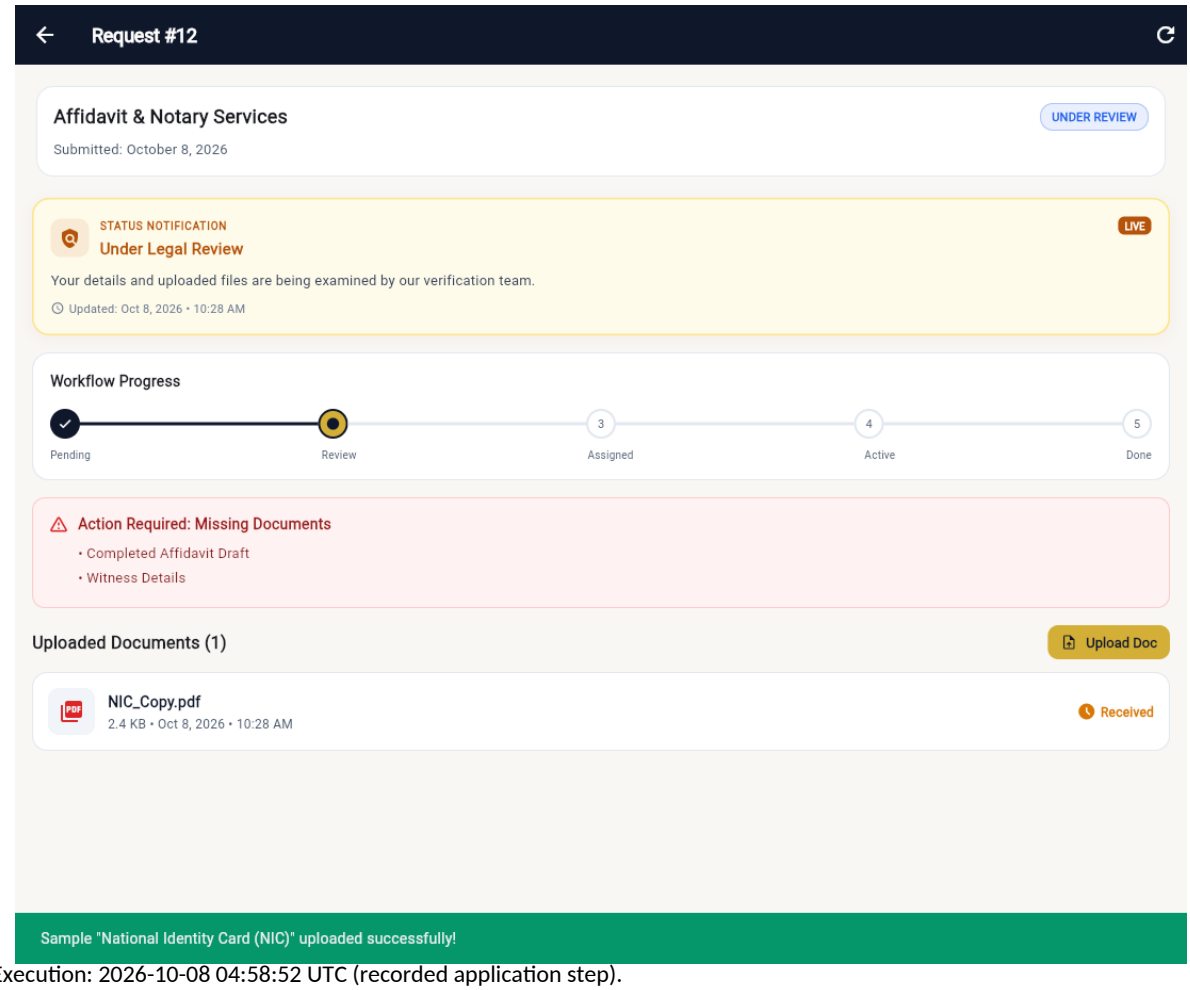

```
    rt [26 ms]
      Passed LegalService.Tests.QmseDocumentTests.Qmse_DEF12_SpoofedPdfMustBeRejected
    [< 1 ms]
      Passed

    QMSE BCrypt prefix/cost: $2a$11$
    [xUnit.net 00:00:01.99]   Finished:    LegalService.Tests
```

Execution: 2026-10-08 05:02:41 UTC.

Source: test-results/completion-20261008-upload-retest.log; completion-20261008/evidence/upload-retest.trx

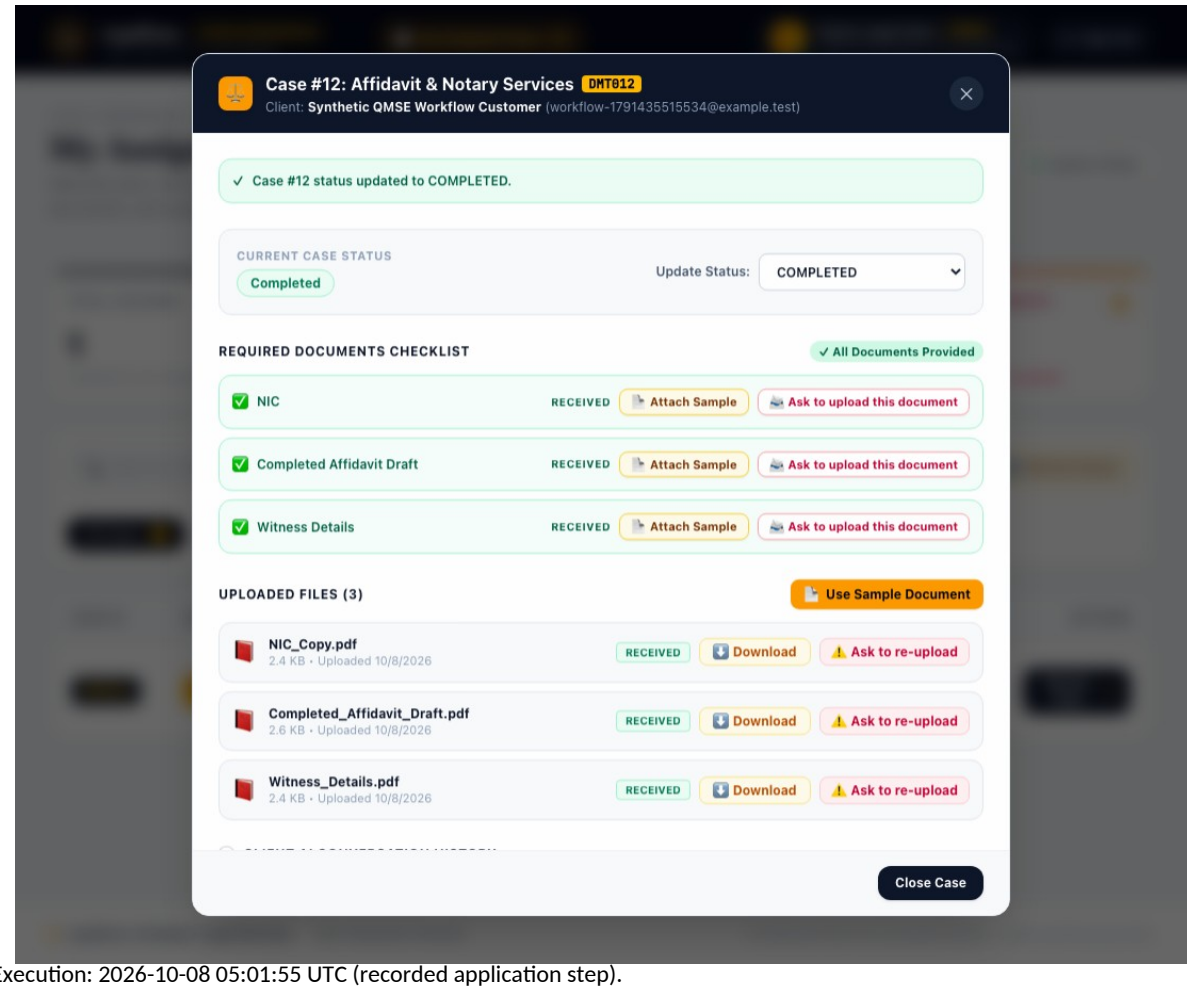

The unchanged original spoof-rejection assertion now passes. This focused execution contains 18 passing tests; genuine PDF/image uploads and the size boundary are also verified. Earlier failure remains Figure 6.2.

Figure 6.15. Real Flutter web submits a genuine bundled PDF

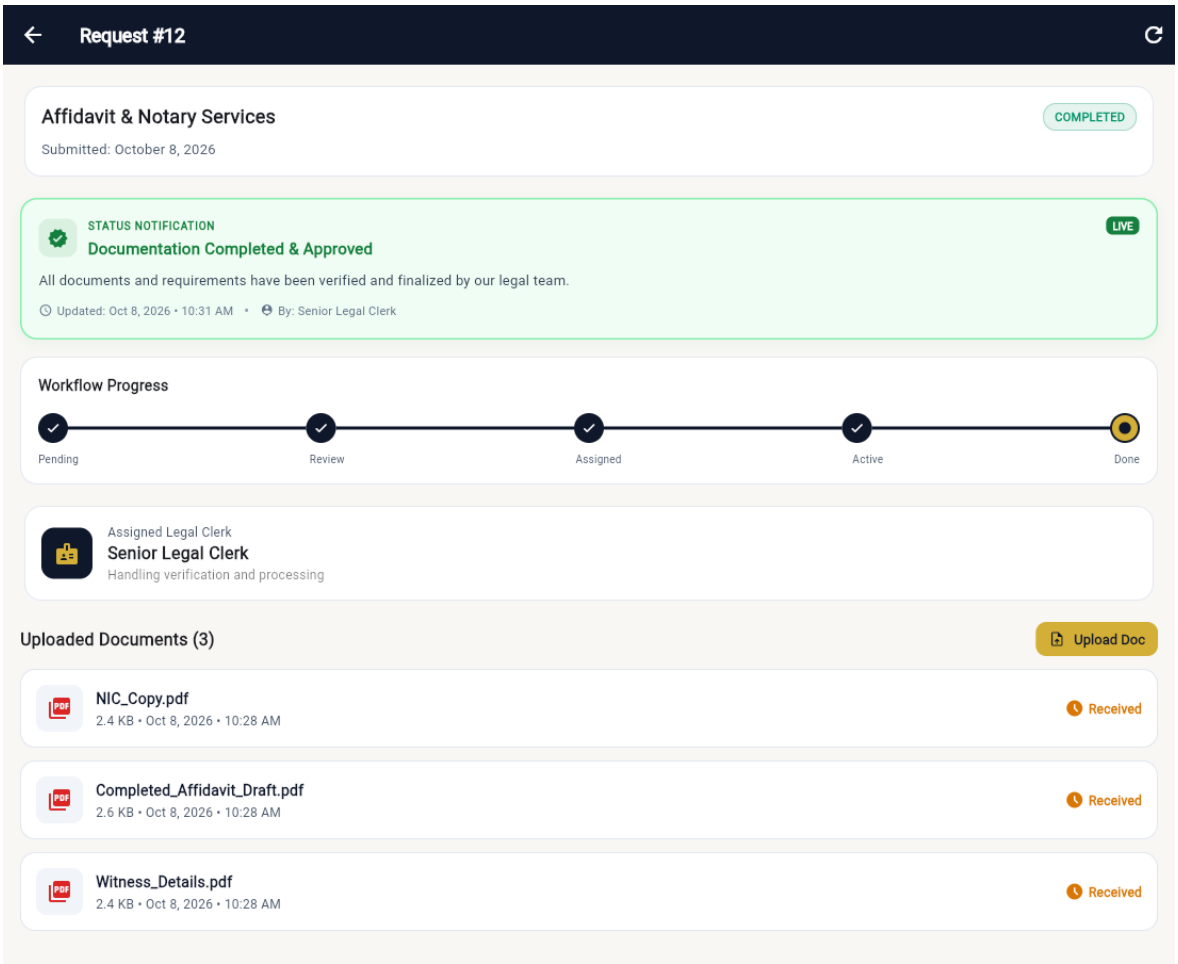

Execution: 2026-10-08 04:58:52 UTC (recorded application step).
Source: completion-20261008/evidence/integrated-final-http.json; completion-20261008/evidence/e2e-10-flutter-uploaded.png
The real Flutter UI completed its multipart upload after the web-platform fix. The actual API returned 201 and stored the bytes in PostgreSQL; two remaining genuine attachments were supplied through the API.

Figure 6.16. Real React clerk performs human review

Execution: 2026-10-08 05:01:55 UTC (recorded application step).
Source: completion-20261008/evidence/integrated-completion-http.json; completion-20261008/evidence/e2e-13-react-completed.png
React uses ClerkId rather than UserId to display the assigned case. The actual human-review status action returned 200 and changed request 12 to COMPLETED.

Figure 6.17. Flutter reads the completed result from the API

Execution: 2026-10-08 05:02:00 UTC (workflow completed).
Source: completion-20261008/evidence/integrated-result.json; completion-20261008/evidence/integrated-final-database.log
Flutter displays COMPLETED after fetching the real API. Independent SQL confirms request 12, clerk 1 and three binary attachments totalling 7,667 bytes. Actual FastAPI clerk ranking preceded explicit human assignment; Gemini was not used.

Figure 6.18. k6 retest against actual PostgreSQL-backed endpoints

328 total: 326 passed, zero failed, two skipped. Real PostgreSQL migration/rollback tests are included. Coverlet raw line coverage is 81.11%, affected by generated migrations; non-migration distinct source lines are 57.82%.

Figure 6.21. Official group repository overview

Repository: Wishwa2002/Intelligent-legal-service; branch: main.

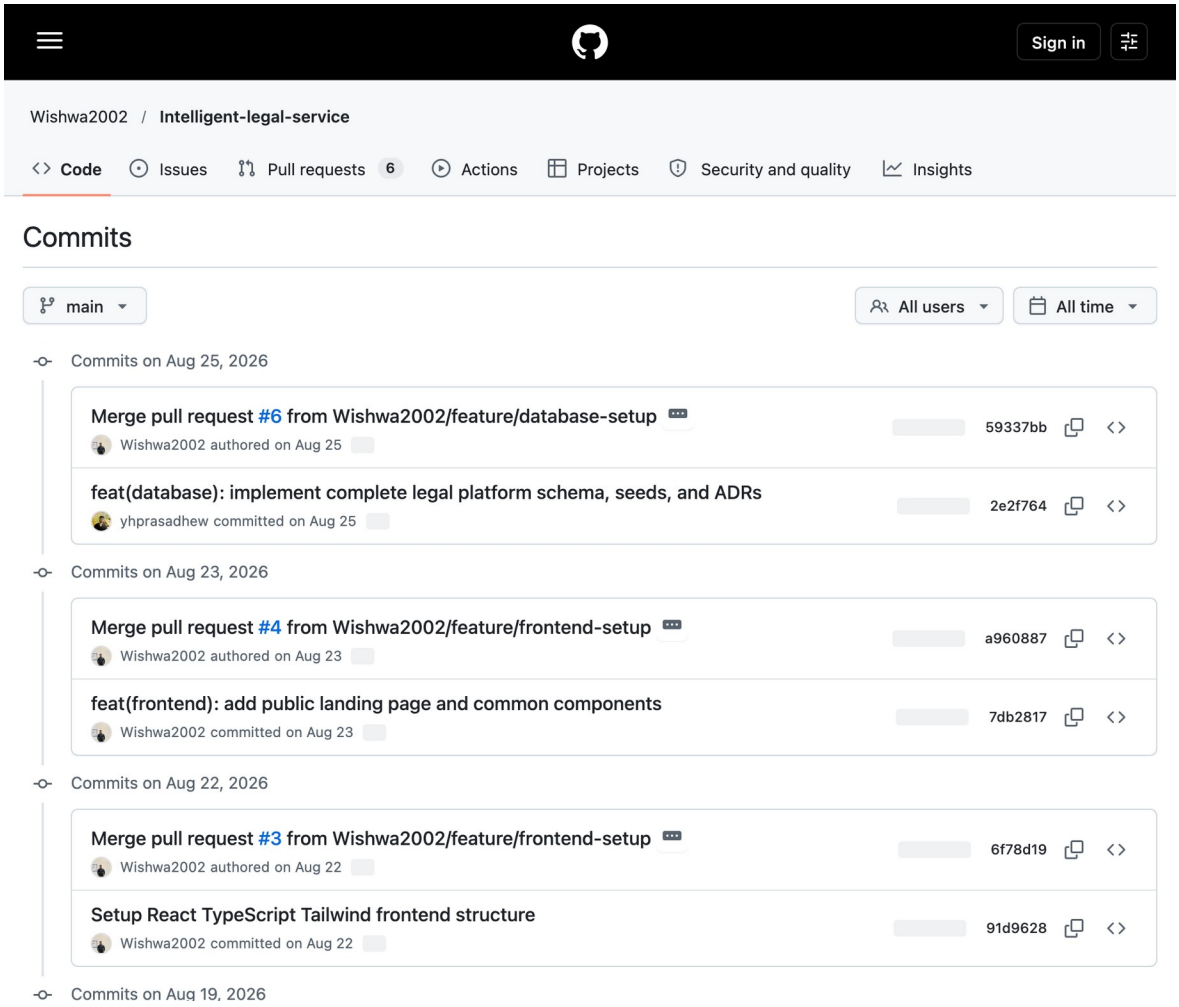

Relevant SHA: 59337bba0227aa07e18e60f697bd758db327f0bd

Git record: Wishwa Wijayananda; author date 2026-08-25T19:08:10+05:30; committer date 2026-08-25T19:08:10+05:30

Capture: 2026-10-08T08:51:42.266Z (UTC); source: https://github.com/Wishwa2002/Intelligent-legal-service

The original group repository remains on its unchanged main revision. This overview establishes repository identity; the final tested implementation is on a separate branch.

Figure 6.22. Original main-branch development history

Repository: Wishwa2002/Intelligent-legal-service; branch: main.

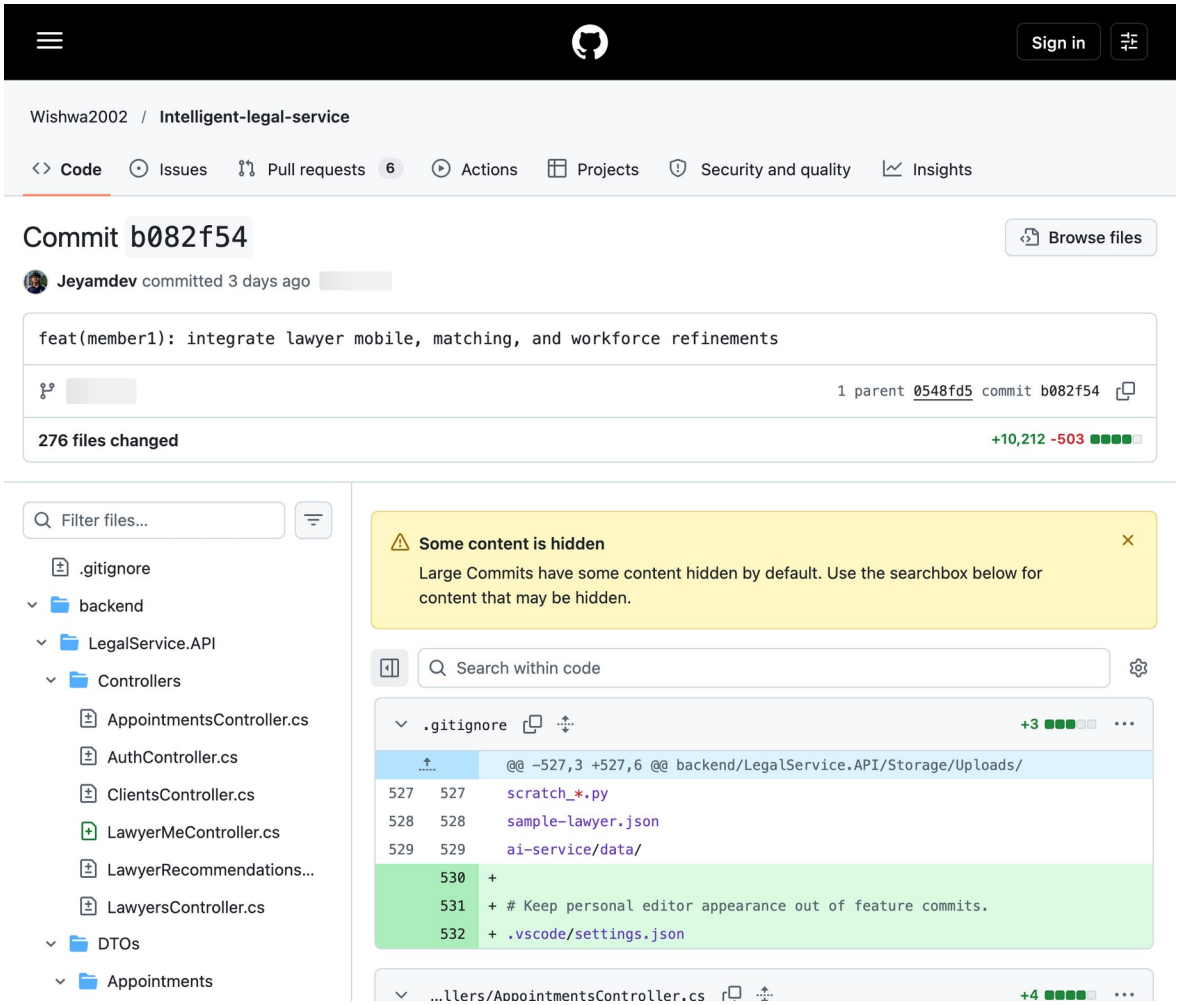

Relevant SHA: 59337bba0227aa07e18e60f697bd758db327f0bd

Git record: Wishwa Wijayananda; author date 2026-08-25T19:08:10+05:30; committer date 2026-08-25T19:08:10+05:30

Capture: 2026-10-08T08:52:53.376Z (UTC); source: https://github.com/Wishwa2002/Intelligent-legal-service/commits/main/

Original dated main commits and author records are preserved. Main has 14 reachable commits under Wishwa and yhprasad-related author strings; other member records occur in incorporated develop/feature history.

Figure 6.23. Original lawyer-management development record

Repository: Wishwa2002/Intelligent-legal-service; branch: develop / tested-branch ancestry.

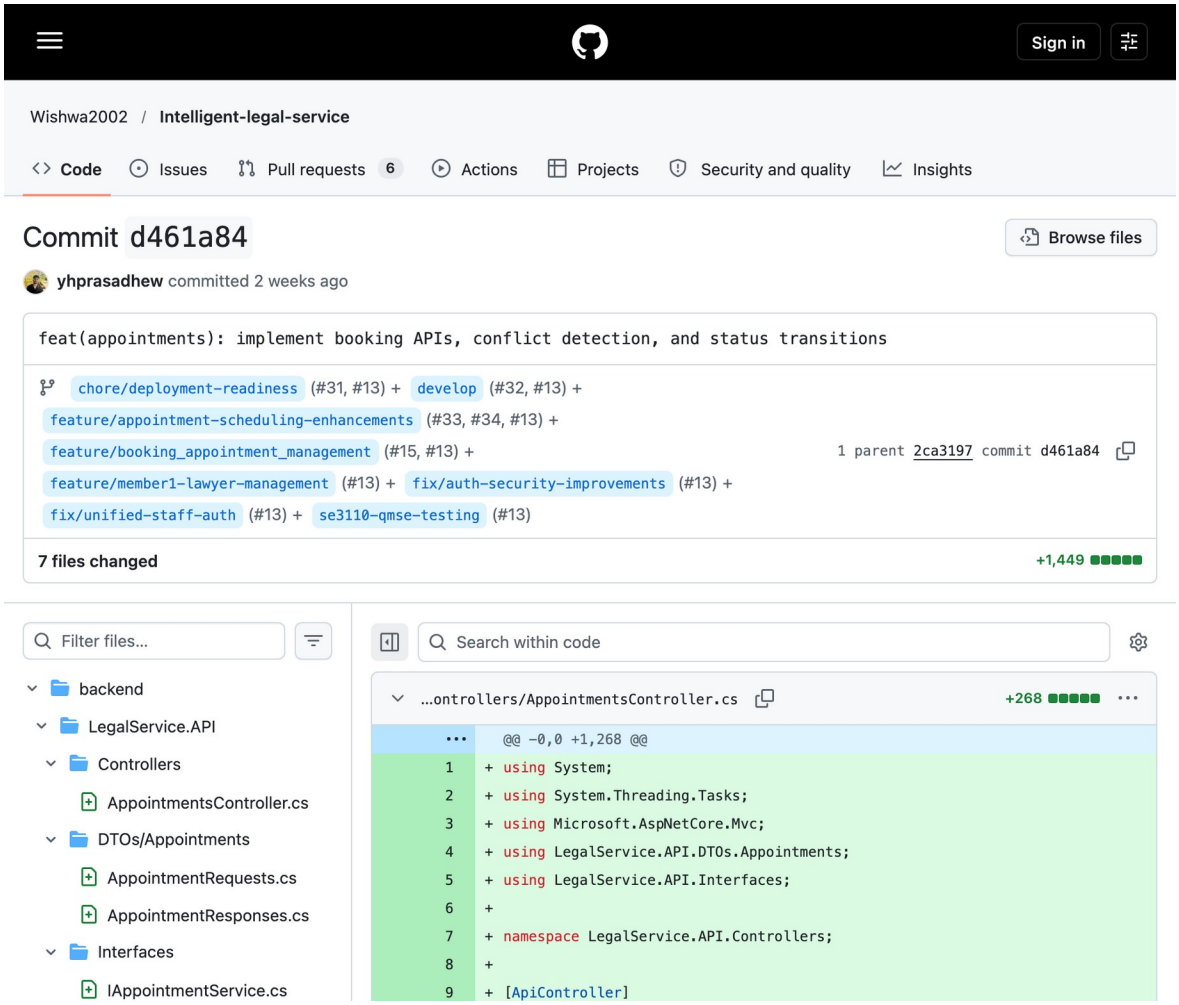

Relevant SHA: b082f54790a0ea5f99db9b31df532d56433319c5

Git record: Jeyamdev; author date 2026-10-05T09:48:02+05:30; committer date 2026-10-05T09:48:02+05:30

Capture: 2026-10-08T08:53:55.801Z (UTC); source: https://github.com/Wishwa2002/Intelligent-legal-service/commit/b082f54

Recorded author Jeyamdev; lawyer/mobile/matching/workforce changes. Related specialization and recommendation commits are linked in Section 9.1. This is historical source evidence; personal effort requires confirmation.

Figure 6.24. Original appointment-management development record

Repository: Wishwa2002/Intelligent-legal-service; branch: develop / tested-branch ancestry.

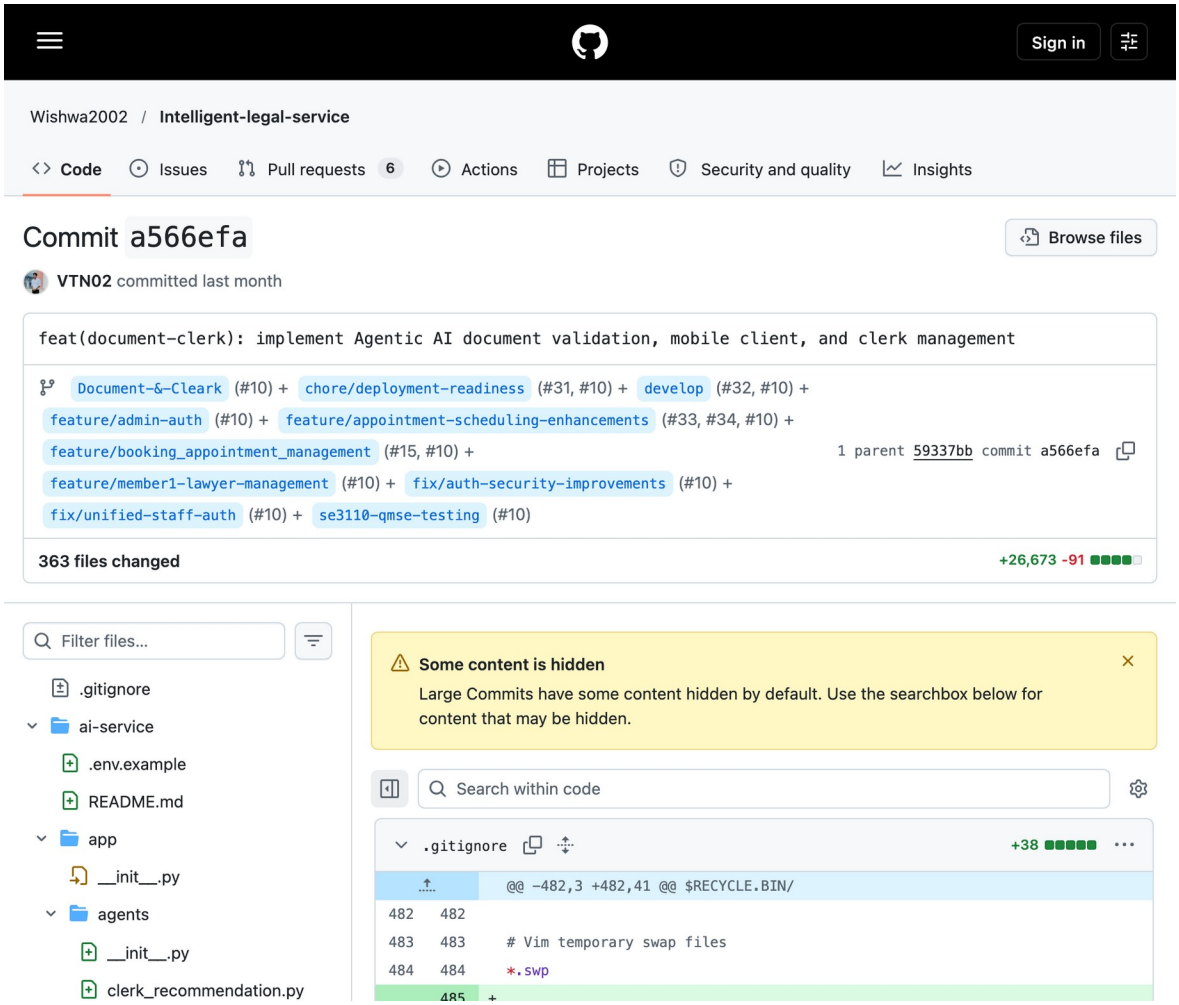

Relevant SHA: d461a8407971eeb7e2349f6ccf5cb8f6150a22be

Git record: yhprasad; author date 2026-09-23T02:32:18+05:30; committer date 2026-09-23T02:32:18+05:30

Capture: 2026-10-08T08:53:58.224Z (UTC); source: https://github.com/Wishwa2002/Intelligent-legal-service/commit/d461a84

Recorded author yhprasad (GitHub account yhprasadhew); appointment APIs, conflict detection and status transitions. Scheduling/careers records are in Section 9.2. This does not prove historical test execution.

Figure 6.25. Original document/clerk/AI development record

Repository: Wishwa2002/Intelligent-legal-service; branch: Document-&-Cleark / tested-branch ancestry.

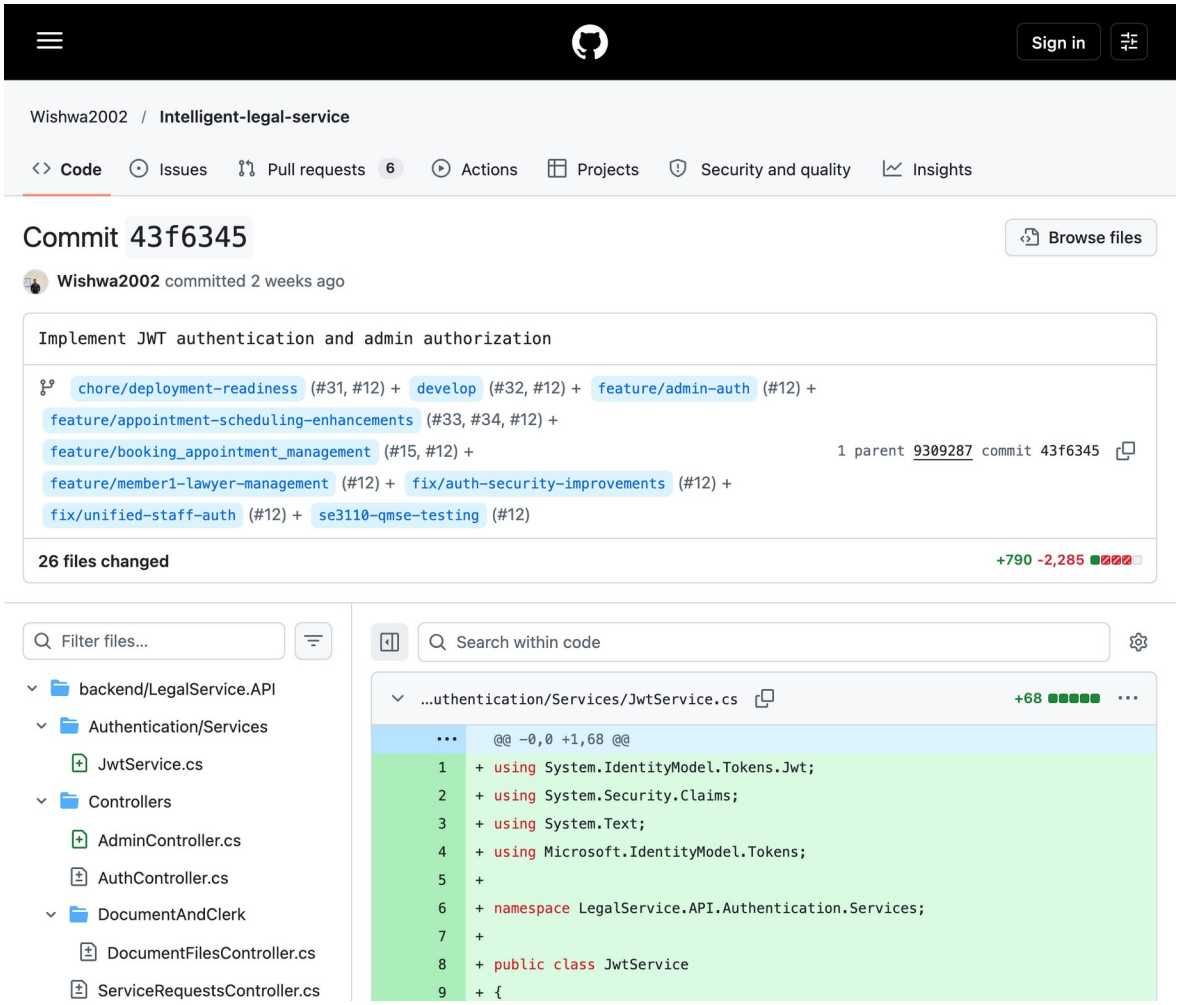

Relevant SHA: a566efa7951fa06505fe4c943014826f3b796170

Git record: VTN02; author date 2026-09-11T17:58:17+05:30; committer date 2026-09-11T17:58:17+05:30

Capture: 2026-10-08T08:54:27.109Z (UTC); source: https://github.com/Wishwa2002/Intelligent-legal-service/commit/a566efa

Recorded author VTN02; document validation, mobile client and clerk management. Section 9.3 records related commits. Shared supervisor code appears in this history, so component assignment alone cannot establish ownership.

Figure 6.26. Original authentication and authorization record

Repository: Wishwa2002/Intelligent-legal-service; branch: feature/admin-auth / tested-branch ancestry.

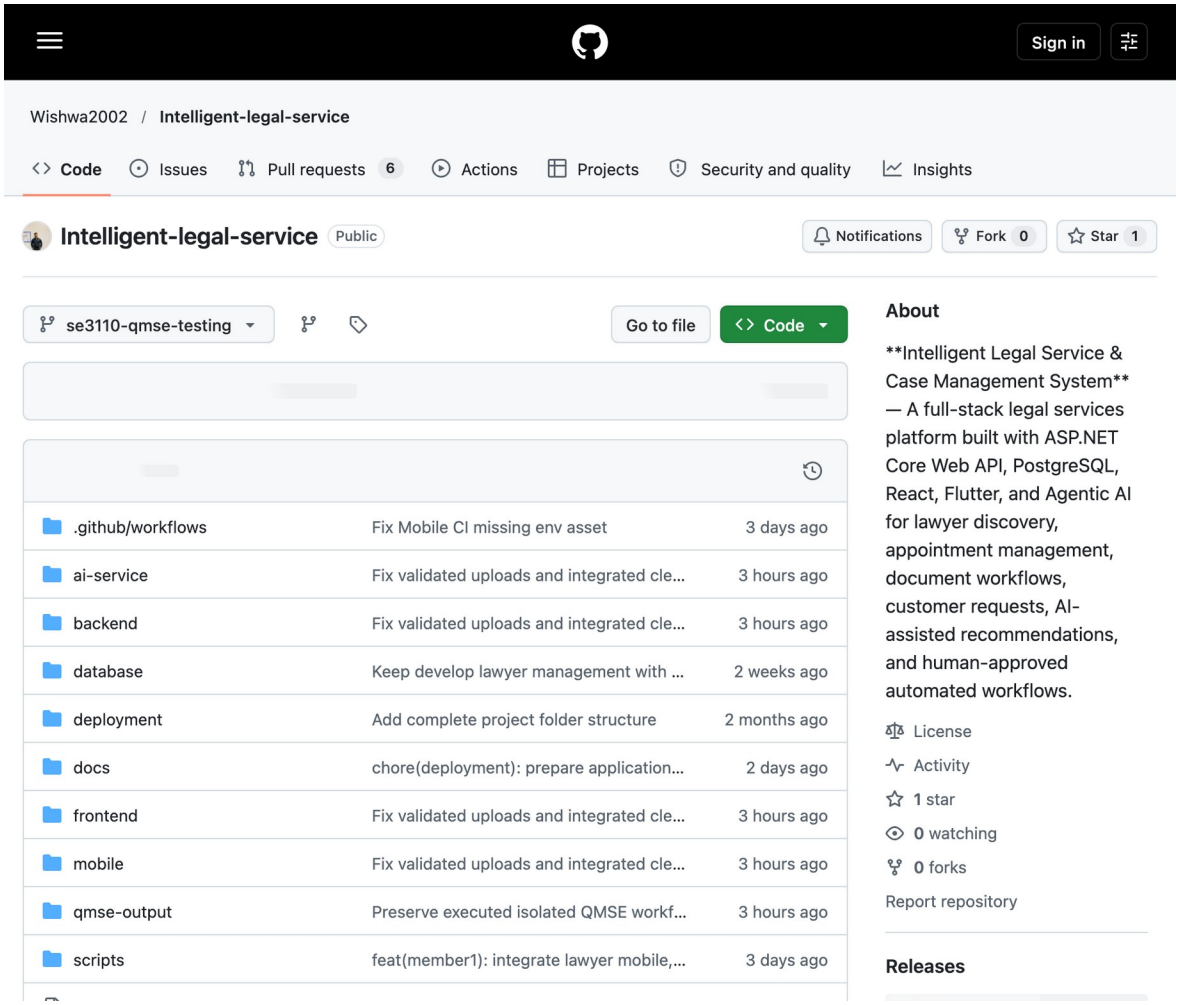

Relevant SHA: 43f6345d8cdd3158e5ecf51d124dcfab869261c9

Git record: Wishwa; author date 2026-09-22T19:41:53+05:30; committer date 2026-09-22T19:41:53+05:30

Capture: 2026-10-08T08:54:27.310Z (UTC); source: https://github.com/Wishwa2002/Intelligent-legal-service/commit/43f6345

Recorded author Wishwa (GitHub account Wishwa2002); JWT/admin authorization and service-request changes. Section 9.4 records related security/service commits and qualifies consultation ownership.

Figure 6.27. Published final QMSE testing branch

Repository: Wishwa2002/Intelligent-legal-service; branch: se3110-qmse-testing.

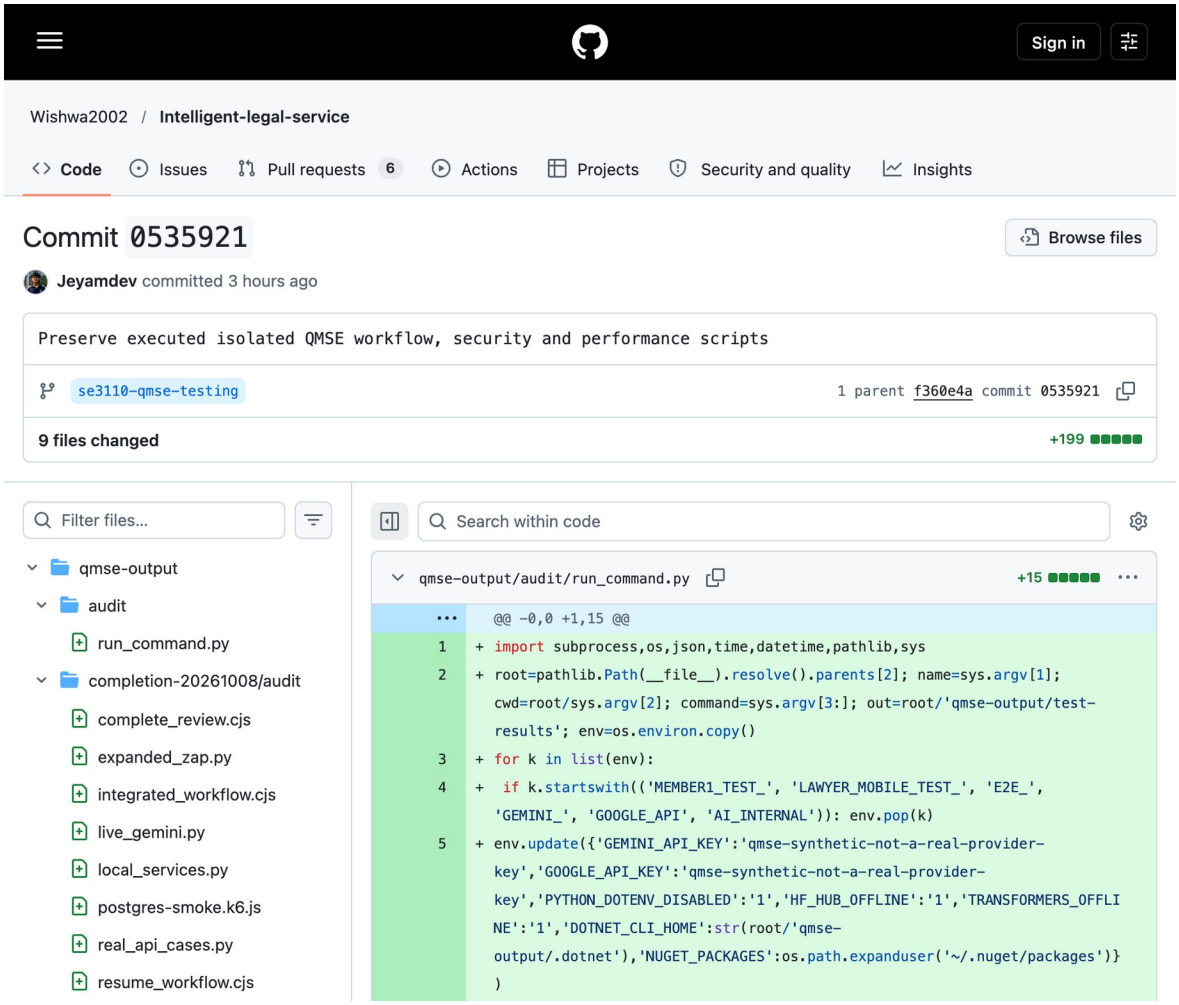

Relevant SHA: 05359214df52fa743b234e1d77e6671f57c14dea

Git record: Jeyamdev; author date 2026-10-08T11:00:40+05:30; committer date 2026-10-08T11:00:40+05:30

Capture: 2026-10-08T08:52:40.197Z (UTC); source: https://github.com/Wishwa2002/Intelligent-legal-service/tree/se3110-qmse-testing

The branch selector identifies the published testing branch. This narrow capture retains asynchronous counter placeholders; the earlier genuine wide capture and native Git verification establish 83 commits beyond main and 97 reachable commits. The remote head matches the approved SHA. All 15 pre-existing branch tips were unchanged immediately after publication; eleven newer deployment-only commits were excluded.

Figure 6.28. Published tested source and replay-script commit

Repository: Wishwa2002/Intelligent-legal-service; branch: se3110-qmse-testing.

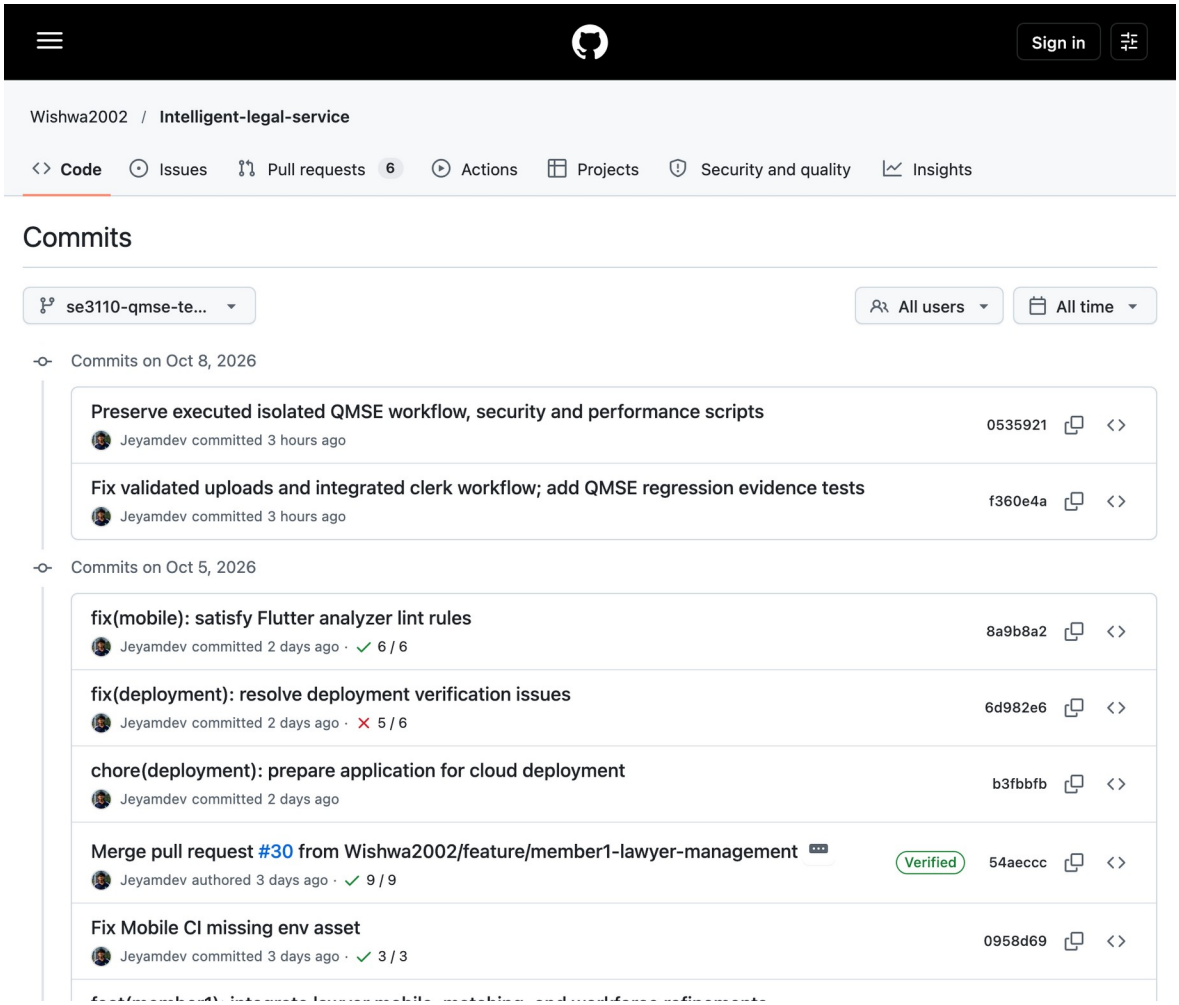

Relevant SHA: 05359214df52fa743b234e1d77e6671f57c14dea

Git record: Jeyamdev; author date 2026-10-08T11:00:40+05:30; committer date 2026-10-08T11:00:40+05:30

Capture: 2026-10-08T09:21:02.853Z (UTC); source: https://github.com/Wishwa2002/Intelligent-legal-service/commit/05359214df52fa743b234e1d77e6671f57c14dea

Actual published commit 0535921 has parent f360e4a. The nine-file replay-script addition preserves executed tooling. Recorded author is Jeyamdev; these Codex-assisted QMSE additions are not original student-development attribution.

Figure 6.29. Published testing-related commit history

Repository: Wishwa2002/Intelligent-legal-service; branch: se3110-qmse-testing.

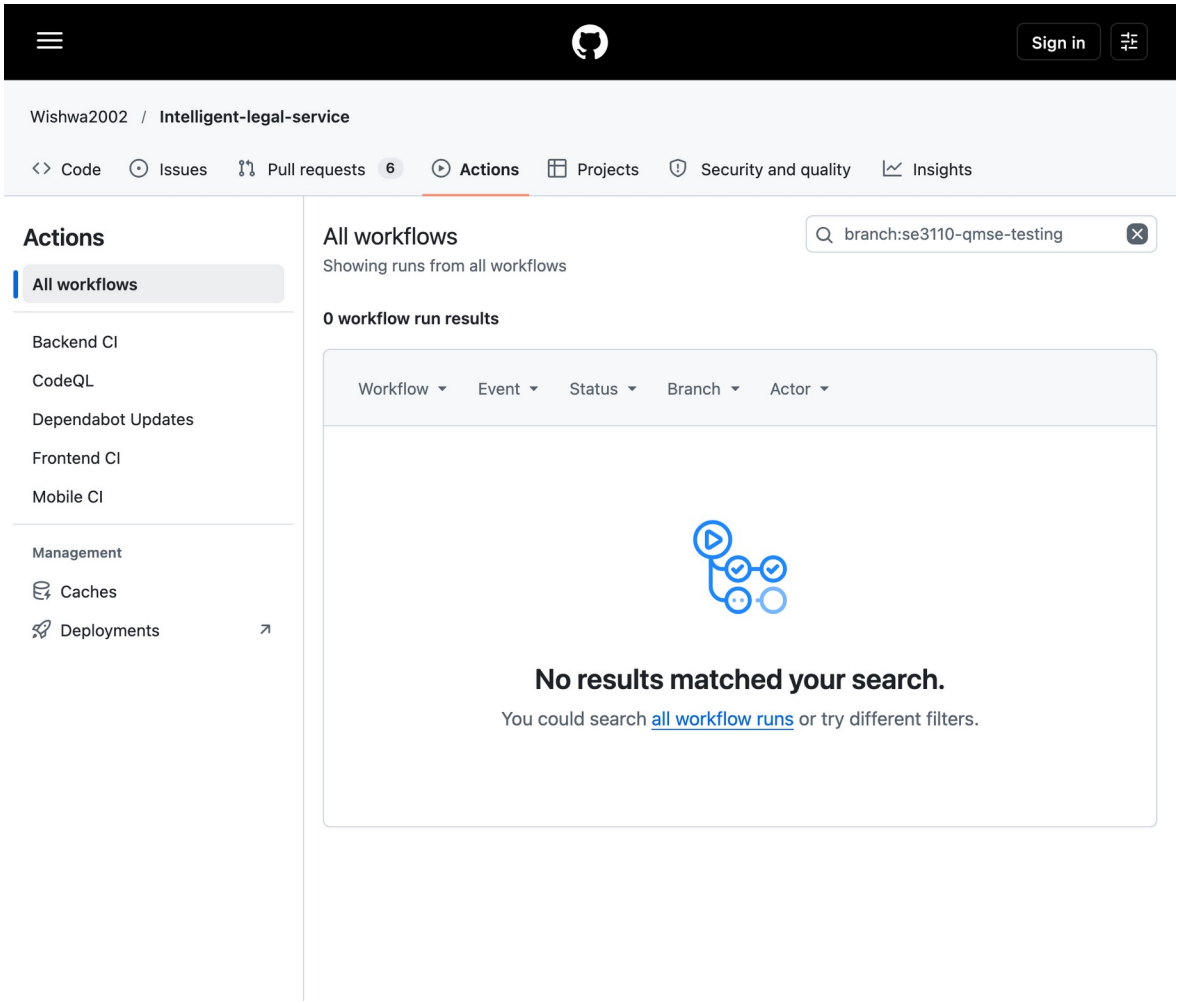

Relevant SHA: 05359214df52fa743b234e1d77e6671f57c14dea

Git record: Jeyamdev; author date 2026-10-08T11:00:40+05:30; committer date 2026-10-08T11:00:40+05:30

Capture: 2026-10-08T08:53:13.747Z (UTC); source: https://github.com/Wishwa2002/Intelligent-legal-service/commits/se3110-qmse-testing/

The two new QMSE commits f360e4a and 0535921 sit above preserved development/deployment ancestry. Git authors and dates remain unchanged. Historical check icons belong to their own revisions, not the latest tested head.

Figure 6.30. GitHub Actions: no run for the published testing branch

Repository: Wishwa2002/Intelligent-legal-service; branch: se3110-qmse-testing.

Relevant SHA: 05359214df52fa743b234e1d77e6671f57c14dea

Git record: Jeyamdev; author date 2026-10-08T11:00:40+05:30; committer date 2026-10-08T11:00:40+05:30

Capture: 2026-10-08T08:53:21.946Z (UTC); source: https://github.com/Wishwa2002/Intelligent-legal-service/actions?query=branch%3Ase3110-qmse-testing

Actual GitHub branch filter shows zero workflow results; read-only API queries also show zero for the exact SHA. Backend, frontend and mobile push filters permit only main/develop; no workflow_dispatch is declared. No CI pass is claimed. Managed workflow trigger settings are not established by source YAML.

7. Non-Functional Test Analysis

7.1 Performance

A controlled k6 2.3.0 retest used two virtual users for 15 seconds against the actual ASP.NET Staging API and isolated PostgreSQL 18. It completed 30 iterations and 120 requests with 0% HTTP errors and 7.803 requests/second. Search p50/p95/average: 3.487/5.679/3.724 ms; details: 2.134/3.528/2.277 ms; appointments GET: 1.500/3.585/1.694 ms; documentation GET: 15.475/20.966/15.831 ms. All measured p95 values meet 200 ms in this small synthetic local scope; no hosted or transactional booking load acceptance is inferred.

- The original login p95 of 180 ms has no measurement artifact. Login latency was not benchmarked in the new run. DEF-07 is a monitoring observation, not a demonstrated breach of the 200 ms budget. Hash cost and latency should be measured with the actual configured deployment.
- One live Gemini request, retries disabled, returned provider ServerError 504 after 29.326 seconds. No successful output/token usage or verified pricing was returned, so estimated cost is unavailable and the 1.5-second successful-response NFR is BLOCKED. Only one of eight authorised calls was attempted; testing stopped on provider failure. Prior mock-gateway timings remain historical mock measurements.
- The initial real PostgreSQL k6 run exposed appointment-list HTTP 500 due to missing migration columns and failed its error threshold. The additive migration fixed the isolated schema, and the retained retest has zero HTTP errors. Read-only endpoint timings do not measure transactional booking throughput. Concurrent booking is separately verified with real PostgreSQL service tests.

7.2 Security

Expanded OWASP ZAP 2.17.0 inspection used 15 deliberate loopback requests to the actual Staging API/PostgreSQL environment, with passive scanning and finite manual authentication/injection probes. Final native report: nine Low X-Content-Type-Options missing instances and one Informational authentication-identification instance. The header finding remains OPEN. The earlier application-error alert associated with schema HTTP 500 is absent after repair; this does not prove absence of other vulnerabilities. No automated active scan, spider or production traffic was used. Genuine upload/JWT/role tests and SQL-like input probes complement the scan.

Git publication security note: GitHub push output reported nine default-branch Dependabot alerts (seven high, two moderate); no authenticated advisory review or remediation was performed. These are separate from local ZAP findings. A database-connection artifact was also identified in pre-existing public main history and is absent from the tested tree. Its contents/credential-like filename are excluded from deliverables; the group must review rotation/removal with repository owners. No history rewrite was authorised.

7.3 Reliability and recovery

Actual PostgreSQL attachment commit failure rolls back the file insert and request-status change. An explicit caller transaction rolls back request creation after failed attachment validation. Separate create/upload HTTP operations remain non-atomic as a group; no new batch operation was invented. Mocked timeout recovery and direct booking without AI still pass at their documented service scope.

7.4 Usability and compatibility

Flutter SDK recovery enabled a genuine web build and actual browser workflow, including upload and synchronized completion. The 49 existing Flutter unit/widget cases also pass. React integration now uses the correct clerk profile ID; two added browser regressions pass and the real queue/review was executed. Physical Android/iOS-device compatibility, accessibility conformance and complete cross-platform equivalence remain unverified.

8. Agentic AI Testing and Evaluation

All 102 final Python deterministic/mocked tests pass. A versioned synthetic Golden Case dataset now records fixtures, expected outputs and success criteria. Three GC-03 deterministic checklist subcases produce the expected missing-document/ready statuses; the GC-04 subcase demonstrates sanitizer isolation only, not live refusal or a universal disclaimer. GC-01 live classification returned provider 504; live GC-02–04 were not attempted after failure. No historical 98.9% mean or original case accuracy is certified.

Control tested	Mechanism	Test
Structured output	Pydantic contracts and current recorded-experience ranking	Scoped schema/ranking tests verified; no live schema-valid response percentage
Read-only boundary (C1 agent)	No DB write capability; advisory result only	Scoped deterministic/mock evidence or blocker in case-verification.json; original whole-control claim unverified
Approval enforcement	Human clerk must approve before final status	Scoped deterministic/mock evidence or blocker in case-verification.json; original whole-control claim unverified
Prompt-injection defence	injection_defense.py sanitises before LLM	Scoped deterministic/mock evidence or blocker in case-verification.json; original whole-control claim unverified
Failure recovery	Mock timeout → generic 503; health returns 200	TC-C113 verified mocked scope; claimed universal 10 s/back-off policy not established

Metric	Target	Result	Comment
Mean golden-case accuracy	> 95%	NOT MEASURED	Original percentages historical/unverified; no labeled live evaluation dataset/run
Intent classification	> 95% (Obj-2)	NOT MEASURED	Original percentages historical/unverified; no labeled live evaluation dataset/run
Schema-valid JSON	100% (NFR-08)	NOT MEASURED	Original percentages historical/unverified; no labeled live evaluation dataset/run

9. Individual Testing Contributions

The original component assignments and member disclosures are retained. Source/test files and 26 original member-associated commit records were checked in the original group repository, with author/date/path evidence and preserved ancestry. Personal ownership, effort and responsibilities still require member confirmation. The two new Codex-assisted QMSE commits are recorded separately and are not individual contribution proof.

Member	Test cases	VERIFIED	FAILED	H/U / BLOCKED	Component
Jeyashankar J	13	7	2	4 H/U; 0 BLOCKED	C1
Buddhika P. Y. H	12	4	1	7 H/U; 0 BLOCKED	C2
Vithusan V	12	4	0	7 H/U; 1 BLOCKED	C3
Wijayananda W. J. W (Team Leader)	12	7	0	4 H/U; 1 BLOCKED	C4

Section 3 status counts are report-case counts. Section 10 lists observed machine cases by named classes; these are not proof of personal ownership or effort percentages.

9.1 Jeyashankar J (IT24103900), C1

Component 1: Lawyer Management, Practice Specializations, Legal Services Catalogue and AI Lawyer Recommendation / Workforce Intelligence

Ownership

Area	Personal contribution
Backend tests	Historical member-assigned claim; ownership confirmation pending: FrontDeskMatchingTests.cs (14) and WorkforceHiringTests.cs (8): 22 xUnit tests, original pass claim unverified; Member1RecommendationTests.cs; Member1PostgresTests.cs
API under test	Historical member-assigned claim; ownership confirmation pending: GET/POST /api/lawyers, GET /api/specializations, PUT /api/legal-services/{id}, POST /api/lawyer-recommendations/match
Web UI tests	Historical member-assigned claim; ownership confirmation pending: lawyer-management.spec.ts (admin availability toggle), member1-guardrails.spec.ts (HTTP 500 handling)
AI evaluation	Historical member-assigned claim; ownership confirmation pending: Golden case GC-01; score-bound and schema validation for LawyerMatchResponse
Fixes	Historical member-assigned claim; ownership confirmation pending: DEF-01, DEF-02, DEF-03, DEF-04

Tools and why they were chosen

- xUnit with an in-memory seeder: fast, deterministic service tests without calling Gemini.
- Isolated Kestrel HTTP fixtures exercise real controller routing, model binding and JWT authorization. Microsoft.AspNetCore.Mvc.Testing/WebApplicationFactory is not declared in the current test project.
- Playwright: drives the real React admin UI and checks state changes without a reload.
- Current recommendation eligibility and score validation use recorded data. Ranking points are recorded experience (0–70); the claimed weighted percentage formula is not implemented.

Test design

Case type	Test cases
Normal	TC-C101 filter, TC-C102 create, TC-C103 update, TC-C104 AI match, TC-C105 forecast, TC-C106 UI toggle
Invalid	TC-C108 duplicate Bar number, TC-C109 Customer forbidden, TC-C110 unknown specialization
Boundary	TC-C107 query length 9/10/1000/1001, TC-C111 score range, TC-C112 headroom 19/20/21%
Failure	TC-C113 Gemini timeout and safe failure

13 cases documented: 7 scoped VERIFIED, 2 FAILED report expectations, 0 BLOCKED and 4 HISTORICAL/UNVERIFIED. These are component-assigned report cases, not proof of personal authorship.

Commit evidence

Commit	Date	Message
0958d69	2026-10-05	Fix Mobile CI missing env asset Recorded author: Jeyamdev; 09:59:05+05:30.
b082f54	2026-10-05	feat(member1): integrate lawyer mobile, matching, and workforce refinements Recorded author: Jeyamdev; 09:48:02+05:30.
0548fd5	2026-10-04	feat(member1): add recurring scheduling and workforce intelligence Recorded author: Jeyamdev; 17:10:08+05:30.
5269539	2026-10-03	fix(mobile): resolve Flutter analyzer issues Recorded author: Jeyamdev; 19:00:11+05:30.
ac62bb7	2026-10-03	fix(member1): persist lawyer user links and schema migrations Recorded author: Jeyamdev; 18:59:39+05:30.
e77187a	2026-09-27	Add Gemini-grounded lawyer recommendation approval workflow Recorded author: Jegatheeswaran Jeyashankar; 23:30:22+05:30.
097ab39	2026-09-28	Complete Member 1 lawyer management requirements Recorded author: Jeyamdev; 03:55:54+05:30.

Original group commit evidence (7 records): Jeyamdev, Jegatheeswaran Jeyashankar, Jeyashankar Jegatheeswaran. The linked commits exist in Wishwa2002/Intelligent-legal-service and are ancestors of the published tested SHA. Author dates and changed paths are recorded in git-publication/evidence/member-commit-evidence.json. Identity association uses the supplied group context; personal effort, responsibility and AI use require member confirmation. No new QMSE work is attributed personally.

AI assistance in testing and how it was verified

Date	Tool	Task	Verification
2026-09-28	Claude 3.7	Pydantic recommendation schema	Historical AI-use disclosure; verification outcome UNVERIFIED: Rejected arbitrary score scaling; unit test asserts score within [0.0, 100.0]
2026-10-02	Gemini 2.0	Matching prompt	Historical AI-use disclosure; verification outcome UNVERIFIED: Ran golden evaluation cases; checked JSON parsing
2026-10-04	Copilot	xUnit stubs for FrontDeskMatching	Historical AI-use disclosure; verification outcome UNVERIFIED: Replaced hard-coded IDs with in-memory seeder; ran dotnet test, 14 passing

Historical defect and fix assignments

DEF-01 (AI free-text and invented win rates), DEF-02 (lawyer-user link persistence), DEF-03 (Flutter analyzer), DEF-04 (mobile CI asset).

How to rerun my tests

Purpose	Command
My backend suites	dotnet test backend/LegalService.Tests --filter "FullyQualifiedName~FrontDeskMatchingTests|FullyQualifiedName~WorkforceHiringTests"
Web UI test	cd frontend && npx playwright test lawyer-management.spec.ts
React suite	cd frontend && npm run test:member1
Recommendation AI	From repository root: cd ai-service .venv/bin/python -m uvicorn lawyer_recommendation.app:app --host 127.0.0.1 --port 8002

Result interpretation

Fresh real PostgreSQL/API evidence verifies lawyer filtering and specialization creation. Duplicate license, Customer authorisation, invalid specialization, score boundaries and mocked timeout tests pass. Query/headroom expectations remain unresolved: the available consolidated specification contains a 20% narrative, while later configurable workforce rules differ. Historical high match scores, fee mutation and availability-toggle scenarios remain unverified. Jeyashankar must confirm responsibilities and intended requirements; new AI-assisted work is not assigned personally.

9.2 Buddhika P. Y. H (IT24103041), C2

Component 2: Lawyer Appointment Scheduling, Booking Lifecycle and Careers Portal

Ownership

Area	Personal contribution
Backend tests	Historical member-assigned claim; ownership confirmation pending: AppointmentServiceTests.cs (22) and CareerServiceTests.cs (11): 33 xUnit tests, original pass claim unverified; RecurringSchedulingTests.cs
API under test	Historical member-assigned claim; ownership confirmation pending: GET/POST /api/appointments, PUT /api/appointments/{id}/cancel, GET /api/careers, POST /api/appointments/resolve-slot
Database	Historical member-assigned claim; ownership confirmation pending: Unique constraint on (LawyerId, AppointmentDate): TC-DB-02; slot calculation TC-BK-02
Web / mobile tests	Historical member-assigned claim; ownership confirmation pending: derived-booking.spec.ts (Playwright), TC-FE-02 booking validation, appointment_test.dart
AI evaluation	Historical member-assigned claim; ownership confirmation pending: Scheduling assistant: relative-date parsing, conflict detection (GC-02)
Fixes	Historical member-assigned claim; ownership confirmation pending: DEF-08, DEF-09, DEF-10, DEF-11

Tools and why they were chosen

- xUnit: service-level tests for slot calculation, conflict detection, cancellation rules and career CRUD.
- Isolated PostgreSQL tests exercise current unique-slot/recurring overlap and concurrent mutation protection. The original claimed (LawyerId, AppointmentDate) constraint is not the current model.
- Playwright: validates the booking journey (select lawyer, pick slot, confirm) in the browser.
- The original 20-string live date-classification evaluation is historical/unverified. Deterministic schedule and conflict cases are traceable to current test artifacts.

Test design

Case type	Test cases
Normal	TC-C2-01 book, TC-C2-03 cancel, TC-C2-04 publish vacancy, TC-C2-05 date parsing, TC-C2-06 UI flow
Invalid	TC-C2-02 reserved slot (409), TC-C2-07 non-admin careers (403), TC-C2-11 outside working hours
Boundary	TC-C2-08 timezone UTC+0 / UTC+5:30, TC-C2-09 cancellation at the 24 h limit
Failure / concurrency	TC-C2-10 two parallel bookings, TC-C2-12 AI service down

12 cases documented: 4 scoped VERIFIED, 1 FAILED report expectations, 0 BLOCKED and 7 HISTORICAL/UNVERIFIED. These are component-assigned report cases, not proof of personal authorship.

Commit evidence

Commit	Date	Message
2c0c4e5	2026-09-26	feat: implement lawyer category management and intelligent agentic scheduling assistant Recorded author: yhprasad; 16:12:35+05:30.
07af04e	2026-09-23	feat: complete Member 2 booking management, careers redesign, and mobile website parity Recorded author: yhprasad; 07:02:00+05:30.
4bec10d	2026-09-23	feat(auth): add one-click demo credentials and active session controls to staff login Recorded author: yhprasad; 03:14:27+05:30.
327bebf	2026-09-23	fix(auth): prevent auto-redirect loop on login page and add admin logout button Recorded author: yhprasad; 03:06:20+05:30.
241db17	2026-09-23	fix(frontend): resolve localhost IPv6 connection refused issue and persist auth token Recorded author: yhprasad; 03:02:02+05:30.
d461a84	2026-09-23	feat(appointments): implement booking APIs, conflict detection, and status transitions Recorded author: yhprasad; 02:32:18+05:30.

Original group commit evidence (6 records): yhprasad, yh prasad. The linked commits exist in Wishwa2002/Intelligent-legal-service and are ancestors of the published tested SHA. Author dates and changed paths are recorded in git-publication/evidence/member-commit-evidence.json. Identity association uses the supplied group context; personal effort, responsibility and AI use require member confirmation. No new QMSE work is attributed personally.

AI assistance in testing and how it was verified

Date	Tool	Task	Verification
2026-09-20	Copilot	Date regex parsing	Historical AI-use disclosure; verification outcome UNVERIFIED: Rejected rigid regex; tested hybrid classifier on 20 natural-language date strings
2026-09-26	Claude 3.7	Conflict LINQ query	Historical AI-use disclosure; verification outcome UNVERIFIED: Added UTC conversion; executed unit tests across UTC+0 and UTC+5:30
2026-09-28	Copilot	Careers controller CRUD	Historical AI-use disclosure; verification outcome UNVERIFIED: Added Admin-only check; verified HTTP 403 for non-admin tokens

Historical defect and fix assignments

DEF-08 (timezone drift), DEF-09 (careers authorisation), DEF-10 (login redirect loop), DEF-11 (IPv6 refusal and token persistence).

How to rerun my tests

Purpose	Command
My backend suites	dotnet test backend/LegalService.Tests --filter "FullyQualifiedName~AppointmentServiceTests|FullyQualifiedName~CareerServiceTests"
Scheduling AI tests	dotnet test backend/LegalService.Tests --filter "FullyQualifiedName~RecurringScheduling"
Web UI test	cd frontend && npx playwright test derived-booking.spec.ts
Scheduling AI service	From repository root: cd ai-service .venv/bin/python -m uvicorn app.main:app --host 127.0.0.1 --port 8001

Result interpretation

Current cancellation characterisation passes at 1439/1440/1441 minutes; historical 24-hour prohibition lacks an established product rule. Real PostgreSQL concurrency has one winner, outside-hours bookings are rejected and direct booking works without AI. Non-admin career publishing is denied. A migration repair makes the real appointment API usable. Historical immediate Confirmed status, timezone and live scheduling outputs remain qualified; Buddhika should confirm original scenarios and ownership.

9.3 Vithusan V (IT24100360), C3

Component 3: Legal Documentation Services, Clerk Management and Verification

Ownership

Area	Personal contribution
Backend tests	Historical member-assigned claim; ownership confirmation pending: DocumentationRequestServiceTests.cs (18), ClerkServiceTests.cs (12), DocumentationServiceServiceTests.cs: 30 xUnit tests, original pass claim unverified
API under test	Historical member-assigned claim; ownership confirmation pending: GET /api/documentation-services, POST /api/documentation-requests, POST /api/document-files/upload, GET /api/clerks, POST /api/clerk-cases/{id}/verify
Integration / E2E	Historical member-assigned claim; ownership confirmation pending: Owner of the seven-step workflow TC-E2E-01 to TC-E2E-07 (Flutter, API, PostgreSQL, AI, React clerk)
Database	Historical member-assigned claim; ownership confirmation pending: Transaction rollback TC-DB-04 (0 orphaned rows)
AI evaluation	Historical member-assigned claim; ownership confirmation pending: Document agent: completeness scoring (50% case), GC-03 (97.0%), OCR fallback
Fixes	Historical member-assigned claim; ownership confirmation pending: DEF-12, DEF-13, DEF-14

Tools and why they were chosen

- xUnit: request lifecycle, upload rules (size, type), clerk assignment and approval transitions.
- The original zero-orphan rollback result is historical/unverified. A three-file atomic application filing/rollback operation was not identified and TC-C3-12 remains blocked.
- Swagger / Postman multipart requests: exercise file upload limits end to end.
- Deterministic completeness check (valid files / mandatory files x 100): easy to assert exactly.

Test design

Case type	Test cases
Normal	TC-C3-01 create request, TC-C3-02 valid upload, TC-C3-04 clerk approval, TC-C3-06 assign clerk
Invalid	TC-C3-03 file over 10 MB, TC-C3-07 spoofed file type, TC-C3-10 unknown service, TC-C3-11 customer approves
Boundary	TC-C3-09 exactly 10 MB and 10 MB + 1 byte
Failure / edge	TC-C3-05 incomplete bundle (50%), TC-C3-08 low OCR confidence, TC-C3-12 transaction rollback

12 cases documented: 4 scoped VERIFIED, 0 FAILED report expectations, 1 BLOCKED and 7 HISTORICAL/UNVERIFIED. These are component-assigned report cases, not proof of personal authorship.

Commit evidence

Commit	Date	Message
fb2513c	2026-09-28	fix(auth): seed and support demo admin and clerk login accounts and credentials Recorded author: VTN02; 11:30:16+05:30.
44f3f25	2026-09-27	feat(document-clerk): add direct manual Create Request button with service dropdown and checklist preview Recorded author: VTN02; 22:53:32+05:30.
0fa6592	2026-09-27	feat(document-clerk): add direct manual Create Request button with service dropdown and checklist preview Recorded author: VTN02; 22:53:32+05:30.
dfc95af	2026-09-27	refactor(mobile): restore CommonAiScreen to bottom nav tab 1 and isolate Document Agent exclusively within Documents catalog Recorded author: VTN02; 22:28:59+05:30.
587e892	2026-09-27	fix(backend): seed all 12 documentation services on startup so Document Agent operates correctly Recorded author: VTN02; 22:17:35+05:30.
a566efa	2026-09-11	feat(document-clerk): implement Agentic AI document validation, mobile client, and clerk management Recorded author: VTN02; 17:58:17+05:30.

Original group commit evidence (6 records): VTN02. The linked commits exist in Wishwa2002/Intelligent-legal-service and are ancestors of the published tested SHA. Author dates and changed paths are recorded in git-publication/evidence/member-commit-evidence.json. Identity association uses the supplied group context; personal effort, responsibility and AI use require member confirmation. No new QMSE work is attributed personally.

AI assistance in testing and how it was verified

Date	Tool	Task	Verification
2026-09-24	Copilot	Multipart upload handler	Historical AI-use disclosure; verification outcome UNVERIFIED: Added magic-byte verification; tested with renamed .exe files, rejected
2026-09-27	Gemini 1.5	Document classification prompt	Historical AI-use disclosure; verification outcome UNVERIFIED: Added fallback heuristics below 60% OCR confidence; tested on low-resolution scans
2026-09-29	ChatGPT	Clerk dashboard UI	Historical AI-use disclosure; verification outcome UNVERIFIED: Verified in browser; inspected clerk action audit log

Historical defect and fix assignments

DEF-12 (spoofed uploads), DEF-13 (services not seeded), DEF-14 (over-confident classification).

How to rerun my tests

Purpose	Command
My backend suites	dotnet test backend/LegalService.Tests --filter "FullyQualifiedName~DocumentationRequestServiceTests|FullyQualifiedName~ClerkServiceTests"
Document AI service	From repository root: cd ai-service .venv/bin/python -m uvicorn app.main:app --host 127.0.0.1 --port 8001

Purpose	Command
Upload test (manual tool)	Isolated fixture only: POST multipart /api/documentation-requests/{requestId}/files with a synthetic PDF exceeding 10 MiB; rejection expected. See QmseDocumentTests for the executed service probes.

Result interpretation

Spoofed-PDF acceptance is repaired and the unchanged original rejection test passes. Genuine PDFs, images, MIME combinations, repository sample PDFs and exact 10 MiB boundaries pass regressions. PostgreSQL rollback tests and the complete Flutter/API/AI/React document workflow provide new evidence. An atomic three-file HTTP operation is still not established. Historical Approved/50% completeness claims differ from current statuses. Vithusan must confirm intended transaction boundary and ownership.

9.4 Wijayananda W. J. W (Team Leader) (IT24102275), C4

Component 4: Legal Consultation and AI Advisor, Client Service Requests and Platform Security

Ownership

Area	Personal contribution
Backend tests	Historical member-assigned claim; ownership confirmation pending: ServiceRequestServiceTests.cs (16) and AuthSecurityTests.cs (10): 26 xUnit tests, original pass claim unverified
API under test	Historical member-assigned claim; ownership confirmation pending: POST /api/auth/login and /register, GET /api/service-requests/my, GET /api/clients, agent-workflow endpoints (start, execute, approve)
Security tests	Historical member-assigned claim; ownership confirmation pending: JWT tampering (jwt.io), RBAC, BCrypt, prompt-injection defence (GC-04)
Web tests	Historical member-assigned claim; ownership confirmation pending: auth.spec.ts (Playwright): login, token storage, logout, protected routes
CI/CD	Historical responsibility claim; member confirmation pending. Actual source files are backend-ci.yml, frontend-ci.yml and mobile-ci.yml. Pushes to se3110-qmse-testing do not match main/develop filters; zero new-SHA runs observed. No every-push/pass claim is supported.
AI evaluation	Historical member-assigned claim; ownership confirmation pending: Consultation supervisor: hybrid RAG (ChromaDB + BM25 + RRF k=40), injection defence, disclaimer
Fixes	Historical member-assigned claim; ownership confirmation pending: DEF-05, DEF-15

Tools and why they were chosen

- Current xUnit tests exercise service-request logic and scoped JWT/authorization checks. AuthSecurityTests.cs is absent; do not assign its claimed ten cases to this member.
- Fresh automated JWT checks use synthetic signing keys in an isolated HTTP fixture. The original jwt.io/Swagger tamper session is historical/unverified; no real token is sent to a third-party website.
- Playwright: real browser checks for token storage and protected routes.
- Published testing branch Actions check: zero runs for SHA 05359214df52fa743b234e1d77e6671f57c14dea and branch se3110-qmse-testing. The three committed source workflows allow push only to main/develop and none declares workflow_dispatch. Managed CodeQL/Dependabot have no observed run for this revision; their trigger settings are not established by source YAML. Separate unapplied CI proposals are retained for review.

Test design

Case type	Test cases
Normal	TC-C4-01 login, TC-C4-03 service request, TC-C4-05 RAG search, TC-C4-06 UI logout
Invalid	TC-C4-02 wrong password, TC-C4-10 duplicate registration
Boundary	TC-C4-09 expired token (24 h)
Security / safety	TC-C4-04 injection, TC-C4-07 token tamper, TC-C4-11 approval enforcement, TC-C4-12 disclaimer

12 cases documented: 7 scoped VERIFIED, 0 FAILED report expectations, 1 BLOCKED and 4 HISTORICAL/UNVERIFIED. These are component-assigned report cases, not proof of personal authorship.

Commit evidence

Commit	Date	Message
ee78a38	2026-09-30	Fix flutter env configuration Recorded author: Wishwa; 22:20:25+05:30.
7cdbb89	2026-09-30	Fix flutter analyzer issues and improve authentication flow Recorded author: Wishwa; 22:07:15+05:30.
9579cee	2026-09-30	Fix authentication security, validation and health check flow Recorded author: Wishwa; 21:35:56+05:30.
3ff0d2a	2026-09-29	Fix frontend auth tests and lawyer dashboard flows Recorded author: Wishwa; 20:19:14+05:30.
4dc9a15	2026-09-29	test: update lawyer management playwright tests for unified auth Recorded author: Wishwa; 19:50:40+05:30.
43f6345	2026-09-22	Implement JWT authentication and admin authorization Recorded author: Wishwa; 19:41:53+05:30.
9309287	2026-09-19	feat: add customer service request management pages Recorded author: Wishwa; 18:02:11+05:30.

Original group commit evidence (7 records): Wishwa, Wishwa Wijayananda. The linked commits exist in Wishwa2002/Intelligent-legal-service and are ancestors of the published tested SHA. Author dates and changed paths are recorded in git-publication/evidence/member-commit-evidence.json. Identity association uses the supplied group context; personal effort, responsibility and AI use require member confirmation. No new QMSE work is attributed personally.

AI assistance in testing and how it was verified

Date	Tool	Task	Verification
2026-09-18	Claude 3.7	JWT token generation	Historical AI-use disclosure; verification outcome UNVERIFIED: Enforced 24 h expiry and audience validation; tampered token rejected with 401 (jwt.io)
2026-09-22	Copilot	GitHub Actions workflows	Historical AI-use disclosure; verification outcome UNVERIFIED: Triggered workflow; build time reduced by 60% with caching
2026-09-25	ChatGPT	RRF ranking function	Historical AI-use disclosure; verification outcome UNVERIFIED: Changed k from 60 to 40; evaluated accuracy on test retrieval queries

Historical defect and fix assignments

DEF-05 (JWT lifetime and audience validation), DEF-15 (authentication security and validation).

How to rerun my tests

Purpose	Command
My backend suites	AuthSecurityTests.cs absent. Use dotnet test backend/LegalService.Tests/LegalService.Tests.csproj --filter FullyQualifiedName~Qmse_TC_C4
Auth UI tests	cd frontend && npx playwright test auth.spec.ts
Full CI locally	dotnet build LegalService.sln && dotnet test backend/LegalService.Tests/LegalService.Tests.csproj --no-build

Consultation ownership limitation: history for app/agents/supervisor.py and its prompt records a566efa/6b59d19 under VTN02. Do not assign this implementation or RAG scoring to Wijayananda solely because it belongs to C4. Shared work and identity mapping require group confirmation. Authentication and service-request evidence under Wishwa is independently recorded (43f6345, 9309287, 9579cee).

Result interpretation

Actual isolated staff login, wrong-password denial and service submission are verified. Expired/invalid/tampered JWT, duplicate registration and role denials pass their documented fixtures. Live refusal, Sri Lankan-law retrieval accuracy and universal disclaimer behaviour remain unverified after provider failure. Wijayananda should confirm guardrail requirements, member disclosures and future CI results after separately authorised push.

10. Group Contribution Matrix

Member	Backend tests	Other testing work	Total .NET tests
Jeyashankar J (C1)	FrontDeskMatchingTests: 13 observed cases, WorkforceHiringTests: 24 observed cases	Group-repository development: 0958d69, b082f54, 0548fd5, 5269539, ac62bb7, e77187a, 097ab39. Personal testing effort/ownership requires confirmation; published QMSE additions are Codex-assisted.	37 observed; ownership unverified
Buddhika (C2)	AppointmentServiceTests: 15 observed cases, CareerServiceTests: 3 observed cases	Group-repository development: 2c0c4e5, 07af04e, 4bec10d, 327bebf, 241db17, d461a84. Personal testing effort/ownership requires confirmation; published QMSE additions are Codex-assisted.	18 observed; ownership unverified
Vithusan (C3)	DocumentationRequestServiceTests: 3 observed cases, ClerkServiceTests: 3 observed cases	Group-repository development: fb2513c, 44f3f25, 0fa6592, dfc95af, 587e892, a566efa. Personal testing effort/ownership requires confirmation; published QMSE additions are Codex-assisted.	6 observed; ownership unverified
Wijayananda (C4)	ServiceRequestServiceTests: 15 observed cases	Group-repository development: ee78a38, 7cdbb89, 9579cee, 3ff0d2a, 4dc9a15, 43f6345, 9309287. Personal testing effort/ownership requires confirmation; published QMSE additions are Codex-assisted.	15 observed; ownership unverified

Observed class counts are derived from the final TRX. Original ownership assignments are historical statements pending member confirmation. New QMSE tests are AI-assisted work from this task, with no invented student attribution or percentage.

Contribution matrix provenance: original member development records are linked in Section 9 and Figures 6.23–6.26. The matrix test counts are observed suite cases, not personal-effort percentages. New Codex-assisted fixes and replay scripts are recorded separately under the actual Git author Jeyamdev (f360e4a,

0535921); no reassignment to students is made. Original main has 14 reachable commits; the testing branch has 97, including 83 beyond main. All original object identities and authors are intact.

11. Conclusion and Recommendations

The task repaired and retested four concrete defects, completed a real Flutter web → API → PostgreSQL/FastAPI → React → Flutter document workflow, and expanded PostgreSQL security/performance evidence. Final automated suites contain no failures; five cases are explicitly skipped across xUnit/Playwright. The report still contains three unresolved expectation conflicts, 49 historical/unverified cases and two blocked cases. Live Golden Case acceptance, native-device/accessibility validation, member confirmation and CI execution for the published tested commit remain outstanding; the published branch is verified, but assessment completeness is not claimed.

Recommendations

1. Retain the fixed upload validation and regressions. Consider deeper image decoding and malware/sanitization controls only against agreed requirements; current format validation is not antivirus.
2. Confirm approval/version precedence for query length, the specification's 20% workforce narrative versus configurable rules, cancellation notice and document transaction boundaries. Preserve conflicting expectations until resolved.
3. Prioritise uncovered business/security branches. Raw line coverage is 81.11%, largely influenced by executed generated migrations; distinct non-migration source coverage is 57.82%, compared with 57.45% previously. This modest change must not be presented as a dramatic business-logic coverage increase.
4. Retain genuine workflow logs/screenshots and rerun on a native Flutter device where available. Confirm the historical Deed/checklist/Approved flow separately rather than treating the verified Affidavit workflow as identical.
5. Address the verified Low missing nosniff header finding through the deployment/security policy. Repeat representative PostgreSQL load after staging approval; current two-user read tests do not certify production capacity.
6. Resolve provider availability/model/budget before further live Golden Cases. Obtain member contribution confirmations and complete native/accessibility/manual demonstrations. CI needs a separately approved configuration revision: current branch filters prevent execution, and no manual dispatch is declared. Publication of the verified SHA is complete; no approval for an additional SHA, deployment or submission is inferred.

12. AI Usage Declaration (CLEAR Framework)

Revision assistance: Codex generated scoped test additions, ran tools, assembled evidence and edited this report on the actual logged execution date. Members must inspect, understand and confirm this work before submission.

CLEAR element	Declaration
Concept	Claude (Anthropic) was used to structure this testing report from the SE3110 specification and the group's SE3090 report.
Limits	Codex assisted tests, four fixes, isolated local execution, repository audit, approved exact-SHA publication and this report revision. No production data was modified and no deployment or submission occurred. New work is not attributed to students without confirmation. Git author metadata is preserved; it is not proof of personal effort.

CLEAR element	Declaration
Examples	Test-case wording and defect narratives were drafted by AI and edited against SE3090 Sections 15 to 17 and Part B.
Assessment	Original spoof assertion failed before and passes after; machine outputs, real workflow, unresolved expectations and live 504 recorded. Historical evidence and 13 figures preserved; final render QA recorded.
Reflection	Every reported result must be reproducible and understood by the responsible member. AI assistance does not establish personal ownership or replace checking the actual system.

Appendix A: Specification Compliance Checklist

This checklist distinguishes verified document/evidence preparation from unresolved execution and assessment requirements. The legitimate individual demonstration/viva requirement is preserved; generic preparation instructions are replaced with actual status.

SE3110 requirement	Where it is covered	Status
Test the same SE3090 integrated system	Sections 1.2, 3 (all cases target LegalEase AI)	VERIFIED: same repository/system; isolated tests
At least one complete integrated workflow	Section 3.5, TC-E2E-01 to 07	VERIFIED: alternate real Affidavit workflow; Flutter web, API, PG, deterministic FastAPI, React; native/live Gemini excluded.
Identify features, workflows and quality risks	Section 1.3 (R1 to R8), 4.3	Documented; approved SE3090 mapping still needs confirmation
Test plan: scope, objectives, areas, tools, environment, responsibilities, schedule	Section 2.1 to 2.7	VERIFIED document structure; actual environment corrected
Normal, invalid, boundary and failure cases	Section 3 and Section 9 test design tables	77 original cases: 23 scoped verified, 3 conflicting expectations, 2 blocked, 49 historical/unverified.
Tools for every technical area (not manual only)	Section 2.3 tool matrix	Real integrated workflow verified; full live AI/native/accessibility gaps disclosed.
Performance and security testing (mandatory)	Sections 3.11, 3.12, 7	Executed real PostgreSQL k6 and expanded local ZAP; remaining scope/alerts disclosed.
Additional non-functional types with justification	Sections 2.3, 7.3, 7.4	Scoped recovery/responsive UI and mobile widget tests; accessibility conformance unverified
Agentic AI testing and evaluation	Sections 3.10, 8	102 deterministic/mocked tests; reproducible subcriteria dataset; live Gemini 504, no verified full Golden Cases.
Actual results with Pass/Fail	Section 3 (all tables)	Fresh scoped observations; original PASS claims qualified
Defects recorded, fixed and retested	Section 5 (DEF-01 to DEF-15)	4 concrete defects fixed and retested; other historical closure not asserted.

SE3110 requirement	Where it is covered	Status
Evidence: output, screenshots, coverage, scans, logs	Section 6 evidence index	VERIFIED paths in evidence index; missing original evidence disclosed
Test Execution Summary	Section 4	VERIFIED machine summaries and report-case counts
Test source code and scripts	Repository: LegalService.Tests, frontend tests, mobile/test	VERIFIED: reusable test source and scripts published at 05359214df52fa743b234e1d77e6671f57c14dea on group se3110-qmse-testing. Native logs/final report supplied separately; no runtime caches published.
GitHub link and commit evidence	Cover page; Section 9 commit tables	VERIFIED publication/ancestry; 26 original member-associated commits with authors/dates/paths. Member effort confirmation remains pending. CI NOT TRIGGERED: main/develop branch filters, no manual dispatch.
Files to rerun the tests	Appendix B	Replay scripts/logs retained; local-service prerequisites and live/provider limitations explicit.
Each student explains own testing (viva)	Section 9, viva talking points	NOT VERIFIED: individual demonstration/member understanding pending
AI usage declared (CLEAR)	Section 12 and per-member AI tables	VERIFIED updated declaration; member historical disclosures preserved

Appendix B: Reproduction Guide

B.1 Prerequisites

- Reproduction requirements: .NET SDK 8.0.x, Node.js, a complete Flutter SDK, Python environment with ai-service requirements, and a dedicated local PostgreSQL cluster. Tested host is macOS ARM64; hosted Windows/Ubuntu results are historical except where CI metadata explicitly supports them.

- Use synthetic local JWT/AI fixture configuration. Keep real database credentials and provider keys outside deliverables. Tests need no production data. Current pytest uses a synthetic initialization key and mocks, not live Gemini access.

Recorded real-workflow setup and replay details are in frontend/tests/qmse-integration/README.md and git-publication/audit/reproduction-published.md. The committed supervisor uses macOS-specific runtime paths; adapt them to the assessor host. A clone contains reusable scripts, not local caches, private settings or the separately delivered native evidence. Build each service and use fresh isolated PostgreSQL fixtures before replay. The reference-assisted publication clone verified remote head and original commit metadata using audited local objects; no application rerun or independent full-object download is claimed. A first unassisted clone timed out and is retained.

B.2 Start the system

Step	Command
Clone and verify	git clone https://github.com/Wishwa2002/Intelligent-legal-service.git cd Intelligent-legal-service git switch se3110-qmse-testing git rev-parse HEAD Expected: 05359214df52fa743b234e1d77e6671f57c14dea
Scheduling / document AI (:8001)	From repository root in a dedicated terminal: cd ai-service python -m venv .venv .venv/bin/python -m pip install -r requirements.txt .venv/bin/python -m uvicorn app.main:app --host 127.0.0.1 --port 8001
Recommendation AI (:8002)	From repository root in a separate terminal: cd ai-service .venv/bin/python -m uvicorn lawyer_recommendation.app:app --host 127.0.0.1 --port 8002 Live provider credentials/usage approval required; offline tests use mocks.
Backend API	Configure only a fresh isolated PostgreSQL connection, generated local JWT/bridge keys and matching AI URLs. From root: dotnet restore LegalService.sln dotnet build LegalService.sln dotnet run --project backend/LegalService.API/LegalService.API.csproj --launch-profile http Profile binds 5000 and 5295; align clients explicitly. Never use a production connection.
React web	From repository root: cd frontend npm ci npm run dev -- --host 127.0.0.1 Configure local VITE_API_URL outside version control.
Flutter application	From repository root: cd mobile flutter pub get Configure ignored .env for the isolated BACKEND_URL. flutter run -d chrome For recorded fixed-port web workflow: flutter build web --debug, then serve mobile/build/web at 55448; generated asset must target local API 55443.

B.3 Run the test suites

Suite	Command
Backend (xUnit)	From repository root: dotnet test backend/LegalService.Tests/LegalService.Tests.csproj --logger "trx;LogFileName=backend.trx" --results-directory qmse-output/reproduction/backend For relational tests set MEMBER1_TEST_POSTGRES and LAWYER_MOBILE_TEST_POSTGRES to a fresh loopback test cluster; fixture databases are created/dropped. Without them PostgreSQL tests can skip.
Backend coverage	dotnet test backend/LegalService.Tests/LegalService.Tests.csproj --collect:"XPlat Code Coverage" --results-directory qmse-output/reproduction/coverage
Node helper tests	cd frontend npm ci npm run test:member1
Playwright component UI	cd frontend npx playwright install chromium npm test -- --reporter=list,html npx playwright show-report Most spec routes are mocked; this is separate from the real integrated workflow.
Flutter unit/widget	cd mobile flutter pub get flutter test --machine Recorded final 49-pass output: test-results/completion-20261008-mobile.log; prior attempts preserved.
Security scan	Prerequisite: ZAP and actual isolated API/PostgreSQL. Retained script: qmse-output/completion-20261008/audit/expanded_zap.py. Confirm its loopback ports and private control files; default recorded mode is passive plus finite manual probes, not automated active scanning.
Controlled k6	k6 run --summary-export=qmse-output/reproduction/k6-summary.json qmse-output/completion-20261008/audit/postgres-smoke.k6.js Requires private /private/tmp/qmse-completion-control/performance.json (local API URL, locally generated token and synthetic lawyerId); 2 VUs/15 s. Run in a fresh clone or adapt the hard-coded summary output path to preserve previous logs.
AI deterministic/mocked	cd ai-service GEMINI_API_KEY=qmse-synthetic-not-a-real-provider-key GOOGLE_API_KEY=qmse-synthetic-not-a-real-provider-key PYTHON_DOTENV_DISABLED=1 HF_HUB_OFFLINE=1 TRANSFORMERS_OFFLINE=1 .venv/bin/python -m pytest tests -s --junitxml=../qmse-output/reproduction/ai.xml Provider calls remain disabled; do not claim live Gemini results.

Suite	Command
Actual integrated workflow	With fresh fixed-port services and private synthetic settings established, from root: node frontend/tests/qmse-integration/integrated_workflow.cjs node frontend/tests/qmse-integration/resume_workflow.cjs node frontend/tests/qmse-integration/complete_review.cjs Verify integrated-result.json AND HTTP/SQL outputs, not intermediate exit codes.

B.4 Test accounts

Tests use synthetic example.test identities and test-only signing material. Production/confidential credentials are excluded. The real workflow used locally generated credentials and private browser state, which are not packaged. Reproduction requires a fresh isolated setup; the original SE3090 account-list reference remains historical/unverified.
